

Trusted Devices

CC File Hidden supports **TrustedDevices™** technology, which means you can have (more than one) trusted device(s) which will let you access CC File Hidden without needing any password. CC File Hidden will check for your available (ready) removable drives in the log in screen. If you plugged the removable drive (trusted) to the computer earlier accessing CC File Hidden, you will not see any log in window on your screen.

How to create a Trusted Device?

1. Select "Options > Quick Access > Trusted Devices".
2. Click "Next" after inserting your removable drive.
3. Select the Removable Drive's Volume Label or Name from the drop down menu and click next.

And now it's a trusted device.

Is it safe?

CC File Hidden, Ninponix and its Representatives recommend the users to keep their Trusted Device(s) somewhere safe nearby. Read the [License Agreement](#) to know exactly, what we do warranty and what we don't.
