

Smart GIS Software

Developed by Smart GIS Company

Mohamed Elsayed Elshayal

Salsabeel Mohamed Elshayal and Yaseen Mohamed Elshayal

- 1) Map editor, 2) Surface analysis,
3) GPS tracking, 4) Downloading Google map,
5) Converting GIS shape files to Google map web GIS and
mobile GIS GPS applications

First African Arabian Egyptian GIS GPS Software

Smart GIS Course Syllabus

1) INTRODUCTION	4
A) Q. WHAT IS A GEOGRAPHIC INFORMATION SYSTEM?.....	4
B) THE DIFFERENCE BETWEEN RASTER AND VECTOR MAPS	4
C) THE RELATION BETWEEN VECTOR SPATIAL LOCATION AND ATTRIBUTE DATA BASE.....	5
D) GIS SHAPE FILE TYPES 2D & 3D (POINT – POLYLINE – POLYGON)	5
2) COORDINATES SYSTEMS	6
A) LON AND LAT GEOGRAPHIC COORDINATE SYSTEM.....	6
B) UNIVERSAL TRANSVERSE MERCATOR COORDINATE SYSTEM UTM	6
C) CONVERTING COORDINATES BETWEEN LON LAT AND UTM	6
D) MAP PROJECTION	7
3) SPATIAL DIGITIZING AND EDITING	9
A) BUILDING NEW SHAPE FILE SPATIAL AND DATA STRUCTURE.....	9
B) DIGITIZING SPATIAL SHAPE FILE (FEATURE – PART – VERTEX)	10
C) EDITING SHAPE FILE (FEATURE – PART – VERTEX)	11
D) MOVE SETTINGS	12
E) MAP VIEW	12
F) CONVERTING BETWEEN SHAPE FILE TYPES 2D & 3D (POINT – POLYLINE – POLYGON)	13
4) LAYER PROPERTIES.....	14
A) LAYER PROPERTIES GENERAL OPTION.....	14
B) LAYER PROPERTIES COLOR OPTION	15
C) LAYER PROPERTIES SELECTION OPTION	16
D) LAYER PROPERTIES EDIT OPTION.....	17
E) LAYER PROPERTIES LABEL OPTION	18
F) LAYER PROPERTIES HYPER LINK OPTION.....	19
G) LAYER PROPERTIES SOURCE OPTION	20
5) ATTRIBUTE DATA TABLE	21
A) MODIFYING DBF FILE DATA STRUCTURE	21
B) EDITING DATA TABLE.....	22
C) RUNNING VB SCRIPT IN DATA TABLE FIELDS	23
D) EDITING ONE FEATURE (RECORD)	23
6) GIS ANALYSIS AND SELECTION	24
A) SELECTION MENU	24
B) NESTED ATTRIBUTE DATA BASE ANALYSIS AND SELECTION	24
C) SPATIAL LOCATION ANALYSIS AND SELECTION.....	25
D) ATTRIBUTE DATA BASE ANALYSIS AND SELECTION	26
7) GIS NETWORK ANALYSIS.....	27
A) NETWORK MENU	27
B) SNAP VERTEXES TO	27

C) DIVIDE POLYLINES ON.....	28
D) DIVIDE POLYGONS ON	29
E) NETWORK BUILD SHORTEST PATH	30
F) LAYER PROPERTIES NETWORK OPTION	30
G) NETWORK BUILD SHORTEST PATH	31
8) SURFACE ANALYSIS	32
A) SURFACE MENU	32
B) BUILDING TIN SURFACE ANALYSIS.....	32
C) BUILDING CONTOURS SURFACE(S) ANALYSIS.....	33
D) CONVERTING 2D TO 3D SURFACE ANALYSIS.....	35
E) CALCULATING AREA AND VOLUME OF SURFACE(S).....	36
F) DOWNLOADING (ASTER AND SRTM) NASA GEO DEM HEIGHT FILES.....	37
G) CONVERT (ASTER AND SRTM) NASA GEO DEM HEIGHT FILES TO TIN SHAPE FILE	37
H) CONVERT ASTER NASA GEO DEM TO COLOR VALUE BMP FILE	38
I) BUILDING CONTOURS FROM ASTER NASA GEO DEM.....	39
9) GIS TOOLS.....	40
A) TOOLS MENU	40
B) CONVERTING VECTOR AND RASTER LAYERS COORDINATES SYSTEM	40
C) CONVERTING LEICA GSI FILES TO GIS SHAPE FILES.....	41
D) CONVERTING SOKKIA FILES TO GIS SHAPE FILES	41
E) CONVERTING AUTOCAD FILES TO GIS SHAPE FILES.....	42
F) CONVERTING GIS SHAPE FILES TO AUTOCAD FILES.....	42
G) CONVERTING GIS SHAPE FILES TO HTML KML WEB GIS SITE.....	43
H) CONVERTING GIS SHAPE FILES TO HTML JS WEB GIS SITES.....	44
10) DOWNLOADING GOOGLE EARTH MAPS.....	46
A) GOOGLE EARTH SEETINGS.....	46
B) DOWNLOAD GOOGLE EARTH MAPS.....	47
C) SAVE MAP AS RECTIFIED IMAGES.....	48
D) SYNCHRONIZE GOOGLE EARTH WITH LON LAT GEOGRAPHIC MAPS.....	49
11) SMART GIS COURSE EXAM (BUILDING A GIS PROJECT)	50
A) DETERMINE A SPECIFIC SMALL WORKING AREA OR CITY.....	50
B) DOWNLOADING SATELLITE IMAGES OF THE WORKING AREA.....	50
C) BUILDING ROADS AND BUILDING SHAPE FILES LAYERS	50
D) DIGITIZING THE WORKING AREA ROADS AND BUILDING LAYERS	50
E) ENTERING THE AVAILABLE ATTRIBUTE DATA OF THE DIGITIZED LAYERS	50
F) SPATIAL AND ATTRIBUTE DATA ANALYSIS OF THE DIGITIZED LAYERS	50
G) DOWNLOADING ASTER DEM NASA HEIGHT FILE OF THE WORKING AREA	50
H) SURFACE ANALYSIS OF THE WORKING AREA	50
I) SAVE IMAGES OF THE PRODUCED MAP (PROJECT GALLERY)	50
J) CONVERTING DIGITIZED GIS LAYERS TO AUTOCAD.....	50
K) CONVERTING DIGITIZED GIS LAYERS TO HTML WEB GIS SITE.....	50

1) Introduction

A) Q. What is a Geographic Information System?

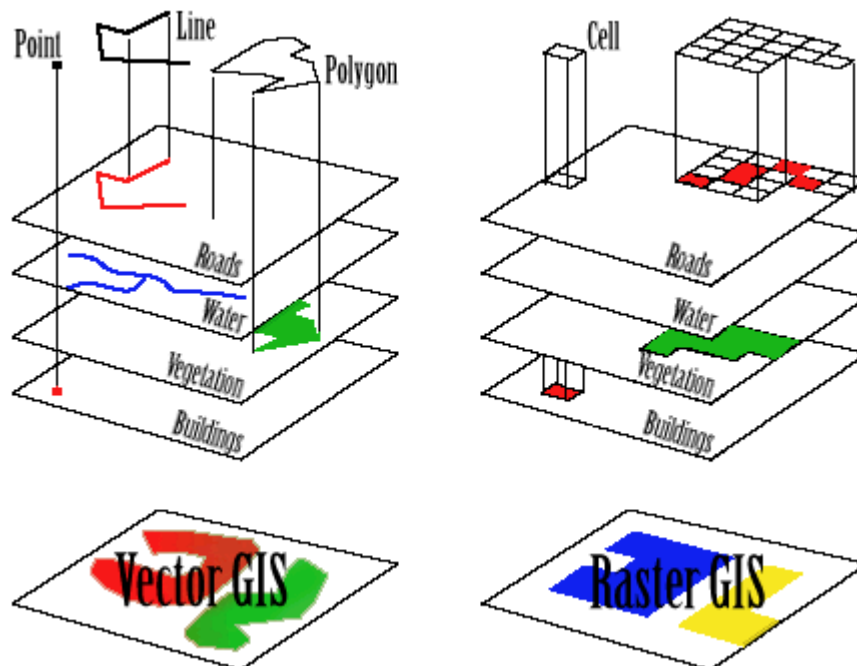

A. Geographic Information System (GIS) is a computer program for storing, retrieving, analyzing, and displaying cartographic data.

Vector Spatial Location Data = X, Y, Z

Attribute Data Base = Data information tables

B) The Difference between Raster and Vector Maps

Maps in Geographic Information Systems are represented thematically. A standard topographic map will show roads, rivers, contour elevations, vegetation, human settlement patterns and other features on a single map sheet. In a GIS these features are categorized separately and stored in different map themes or overlays. For example, roads will be stored in a separate overlay. Likewise, rivers and streams will each be stored as a separate theme. This way of organizing data in the GIS makes maps much more flexible to use since these themes can be combined in any manner that is useful. The following illustration shows conceptually how maps are stored as themes in a GIS.

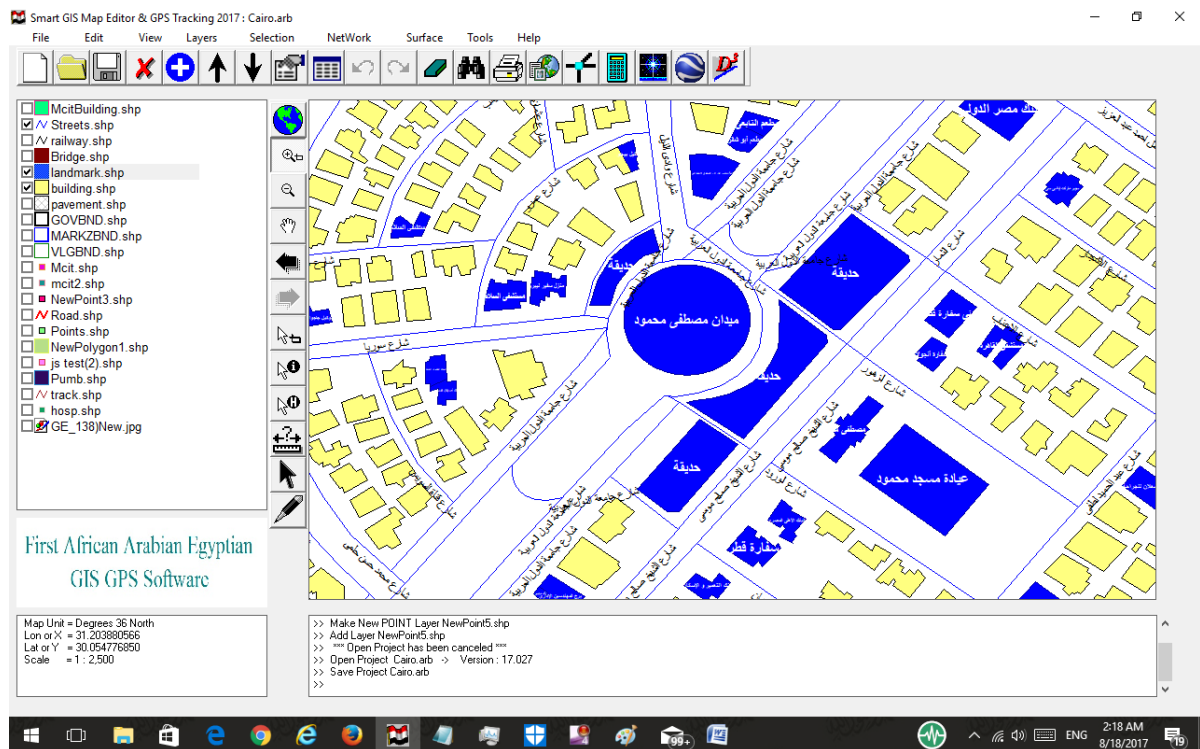

Each different theme is stored on a separate overlay. The overlays on the left represent a vector based GIS, where the information is stored as a series of points, lines and polygons. The overlays on the right represent a raster based GIS, where the information is stored as a series of discrete units called cells.

C) The Relation between Vector Spatial Location and Attribute Data Base

- Each Spatial Layer is consist of many Spatial features
- Each Spatial Feature consist of many vertexes (x, y, z)
- Each Spatial Layer is related to one Attribute Data Base Table
- Each Spatial Feature is related to one Attribute Data Base Record
- Each Record consist of many fields (up to 255)

D) GIS Shape File types 2D & 3D (Point – Polyline – Polygon)

- Shp file contain spatial Location data of each feature Which are:-
 - Type 2D & 3D (Point – Polyline – Polygon)
 - Number of Parts
 - Number of Vertexes
 - X,Y, and Z of each vertex
- Dbf file contain Attribute Data
 - Each Attribute Data table consist of many records
 - Each record consist of many fields (up to 255)
- Shx file is a relation file between the Shp file and Dbf fie
- Point Layer consist of one vertex per Feature(x, y, z)
- Polyline Layer consist of many vertexes per Feature
- Polygon Layer consist of many vertexes per Feature and closed

2) Coordinates Systems

A) Lon and Lat Geographic Coordinate System

The geographic latitude (abbreviation: Lat., or phi) of a point on the Earth's surface is the angle between the equatorial plane and a line that passes through that point

The North Pole is 90° N; the South Pole is 90° S. The 0° parallel of latitude is designated the equator, the fundamental plane of all geographic coordinate systems. The equator divides the globe into Northern and Southern Hemispheres.

The Longitude (abbreviation: Long., or lambda) of a point on the Earth's surface is the angle east or west from a reference meridian to another meridian that passes through that point.

All meridians are halves of great ellipses (often improperly called great circles), which converge at the north and south poles.

B) Universal Transverse Mercator Coordinate System UTM

The UTM system divides the surface of Earth between 80°S and 84°N latitude into 60 zones, each 6° of longitude in width and centered over a meridian of longitude. Zone 1 is bounded by longitude 180° to 174° W and is centered on the 177th West meridian. Zone numbering increases in an easterly direction.

Each of the 60 longitude zones in the UTM system is based on a transverse Mercator projection, which is capable of mapping a region of large north-south extent with a low amount of distortion. By using narrow zones of 6° (up to 800 km) in width, and reducing the scale factor along the central meridian by only 0.0004 to 0.9996 (a reduction of 1:2500), the amount of distortion is held below 1 part in 1,000 inside each zone. Distortion of scale increases to 1.0010 at the outer zone boundaries along the equator.

C) Converting Coordinates Between Lon Lat and UTM

Convert Coordinates System Calculator

Geographic (Degrees Minutes Seconds)	Geographic (Decimal Degrees)	UTM Spheroid
Lon: 30 57. 19.21 Lat: 30 48. 24.88	Lon: 30.955336111 Lat: 30.806911111	World Geodetic System 1984 (WGS 84) X: 304391.90707515 Y: 3409991.14711556 Zone: 36 (1 - 60) Hemisphere: <input checked="" type="radio"/> N <input type="radio"/> S
Convert	Convert	Convert

Converting Coordinates System Calculator

D) Map Projection

Configure New Transverse Mercator Projection

Datum Name:

Spheroid Data

Select Spheroid:

Spheroid Name:

Semi Major Axis:

Semi Minor Axis:

Flattening:

Datum Data

Central Meridian:

Scale_Factor:

False Easting:

False Northing:

Latitude Of Origin:

To WGS84 Transformations

Note :
Configure New Transverse Mercator Projection works only with Transverse
Mercator projections - For more information kindly please visit :-
<http://www.SpatialReference.org>

Configuring new Projection System

Menu → Tools → Configure New Projection System

- Load Projection File
- Add
- Save Projection File
- Remove
- Semi Major Axis
- Semi Minor Axis
- Flattening value
- Central Meridian
- False Easting
- False Northing
- Latitude of Origin
- To WGS84 Transformation

The image shows a 'Map Projection Definition' dialog box with two main sections: 'Defined Map Projection' and 'Measuring Projection'. Both sections have identical settings.

Defined Map Projection:

- Unit: Meters (dropdown menu)
- Coordinates System: Egypt_Red_Belt (dropdown menu)
- Zone: 36 (text input) (1 - 60)
- Hemisphere: ☒ N ☐ S
- Note: Defined Map Projection will be used to Define Map Coordinates System

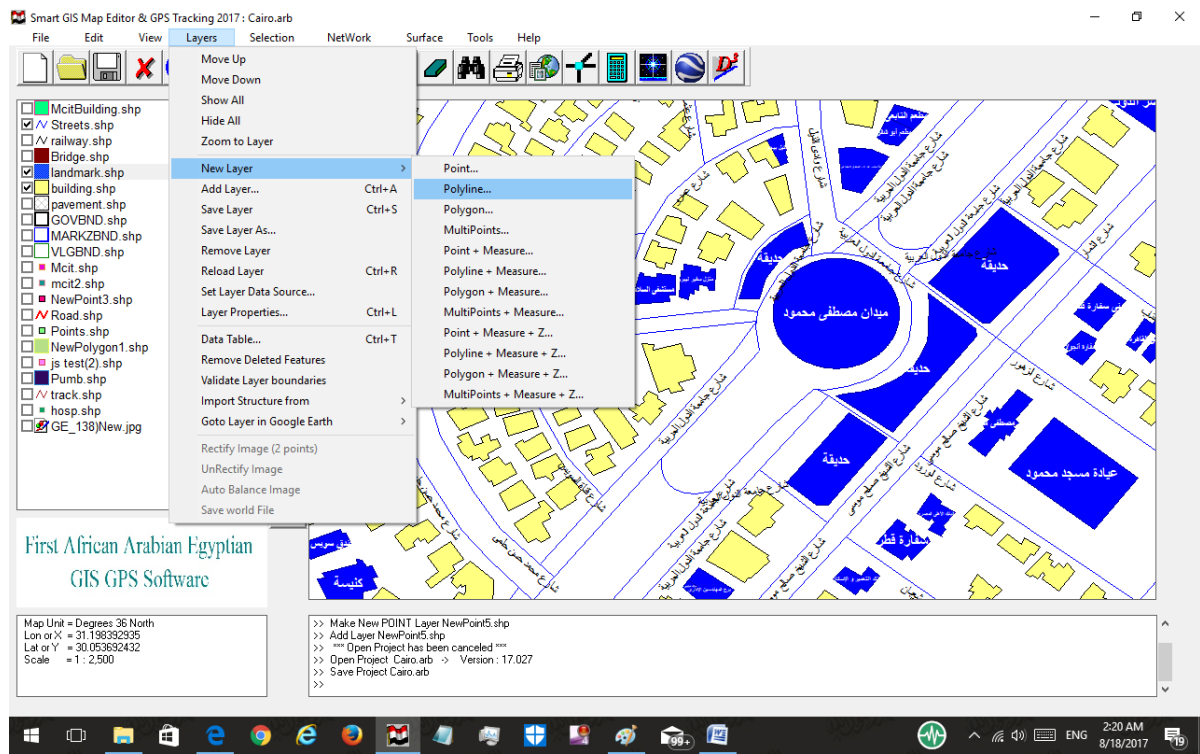

Measuring Projection:

- Unit: Meters
- Coordinates System: Egypt_Red_Belt (dropdown menu)
- Zone: 36 (text input) (1 - 60)
- Hemisphere: ☒ N ☐ S
- Note: Measuring Projection will be used to calculate Length, Area, Distance, and Scale

At the bottom, there are three buttons: 'Ok', 'Cancel', and 'Apply'.

3) Spatial Digitizing and Editing

A) Building New Shape File Spatial and Data Structure

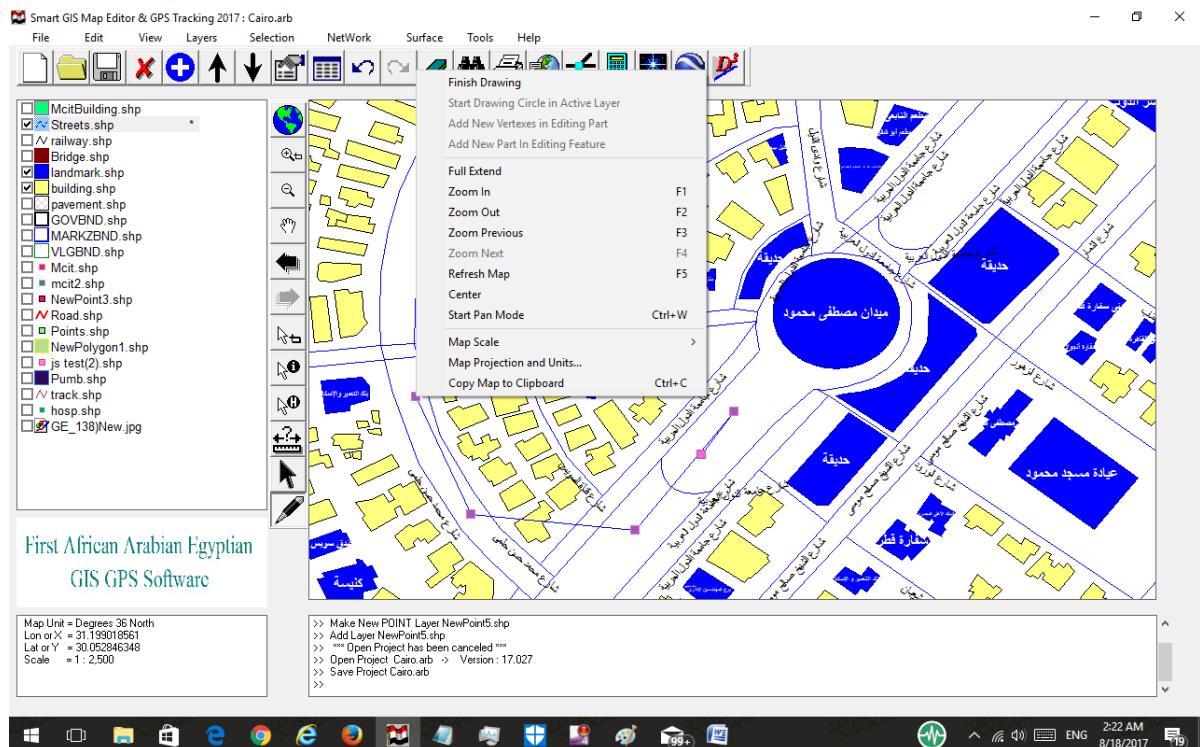

Building New Spatial Shape File

Menu → Layers → New Layer → Select Layer type

- Move up, Moves the selected layer up
- Move Down, moves the selected layer down
- Show all Layers
- Hide all Layers
- New Layer, Build a new Layer
- Add Layer, add an existing layer on the map viewer
- Save Layer
- Save Layer as, save the layer with different name
- Rectify Image (2 points)
- Un Rectify Image
- Validate Layer boundaries
- Go to Layer in Google Earth
- Remove layer
- Remove deleted features
- Import structure from
- Reload Layer
- Set Layer Data Source
- Data Table
- Layer Properties
- Zoom to Layer

B) Digitizing Spatial Shape File (Feature – Part – Vertex)

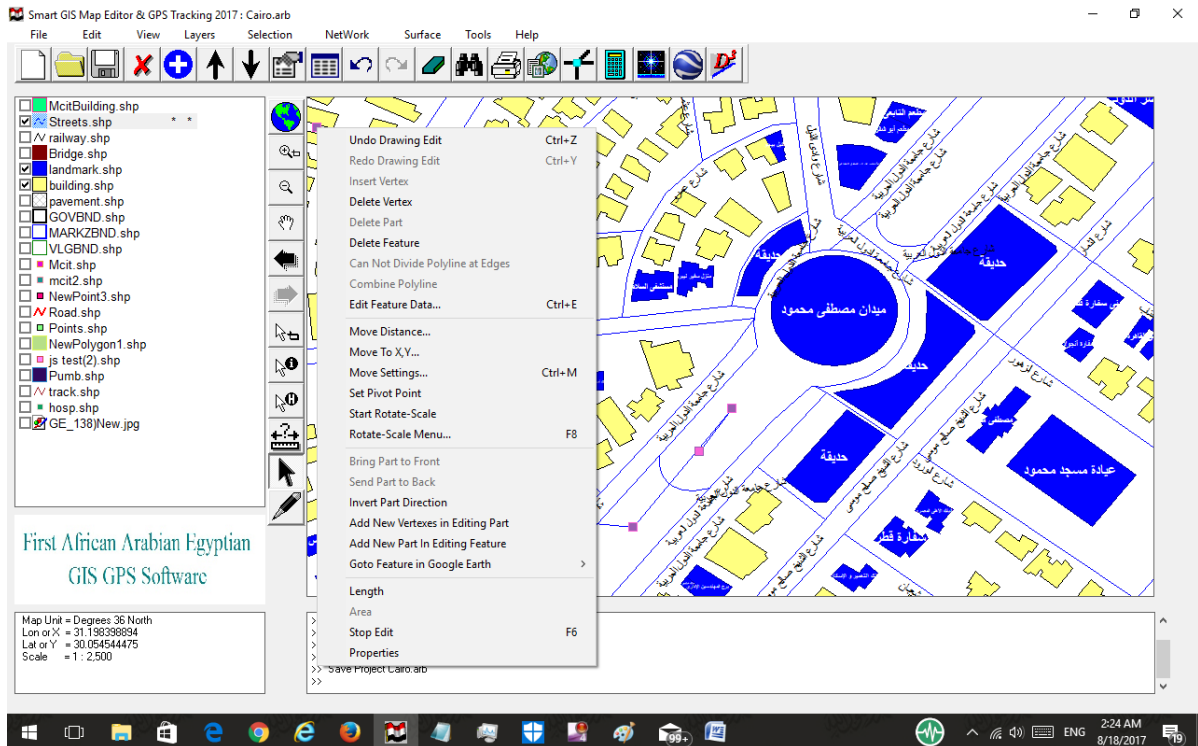

Digitizing Spatial Shape file

Buttons → Add New Feature → Start Digitizing

- Finish Drawing
- Start Drawing Circle in Active Layer
- Add New Vertex in Editing Part
- Add New Part in Editing Feature
- Full extend
- Zoom in
- Zoom out
- Center
- Pan move
- Start Pan mode
- Map Scale
- Map Projection and Unit
- Zoom Previous
- Zoom Next
- Refresh map
- Copy Map to Clipboard

C) Editing Shape File (Feature – Part – Vertex)

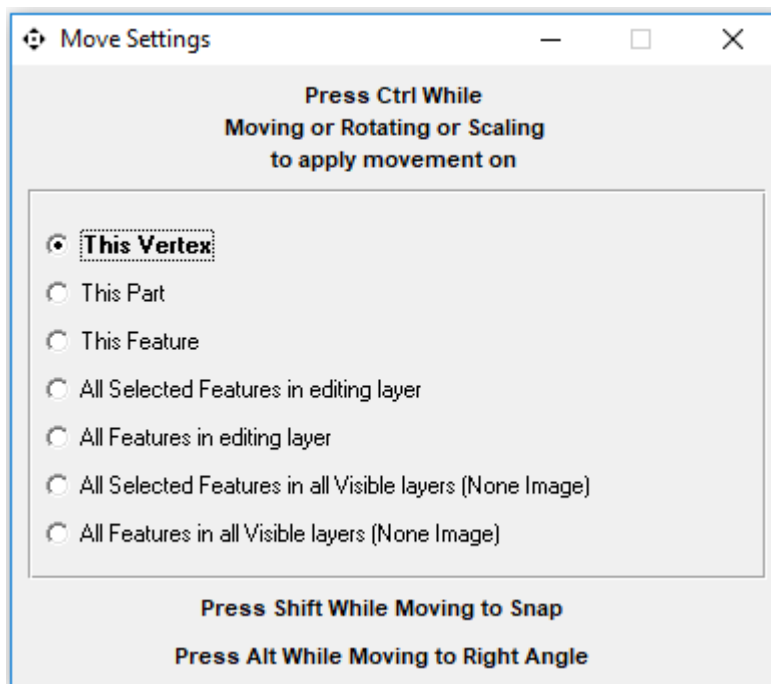

Editing Spatial Shape file

Buttons → Edit Feature → Click cursor on the Feature → Right Click

- Undo Drawing Map
- Redo Drawing Map
- Insert Vertex
- Delete Vertex
- Delete Part
- Delete Feature
- Divide Feature
- Combine Feature
- Edit Feature Data
- Move Distance
- Move to X , Y
- Move Settings
- Set Pivot Point
- Rotate – Scale
- Rotate – Scale menu
- Go to Feature in Google Earth
- Bring Part to Front
- Send Part to Back
- Invert part Direction
- Add New Vertex in Editing Part
- Add New Part in Editing Feature
- Length
- Area
- Stop Edit

D) Move Settings

Editing Spatial Shape file

Menu → Layers → Move Settings

Press Ctrl while moving or Rotating or Scaling to apply movement on

- This Vertex
- This Part
- This Feature
- All Selected Features in Editing Layer
- All Features in Editing Layer
- All Selected Features in All Visible Layers (None Image)
- All Features in All Visible Layers (None Images)

Press Shift while Moving to Snap or Press Alt while Moving to Right Angle

E) Map View

Full Extend	
Zoom In	F1
Zoom Out	F2
Center	
Pan Move	▶
Start Pan Mode	Ctrl+W
Map Scale	▶
Map Projection and Units...	
Zoom Previous	F3
Zoom Next	F4
Refresh Map	F5
Copy Map to Clipboard	Ctrl+C

Menu → View

F) Converting between Shape File types 2D & 3D (Point – Polyline – Polygon)

Convert Shape Type and Grouping

From Layer: Streets.shp [Convert]

Layer Type: PolyLine [Terminate]

Criteria: All Features

To New Layer: F:\Maps\CairoGeo\NewShape1.shp [Browse]

Layer Type: Point

☒ Group By ☒ Sum Numerical Fields

Group by Field: NAME

Note :
Convert ShapeType and Grouping is a very powerfull tool, So please use it carefully.

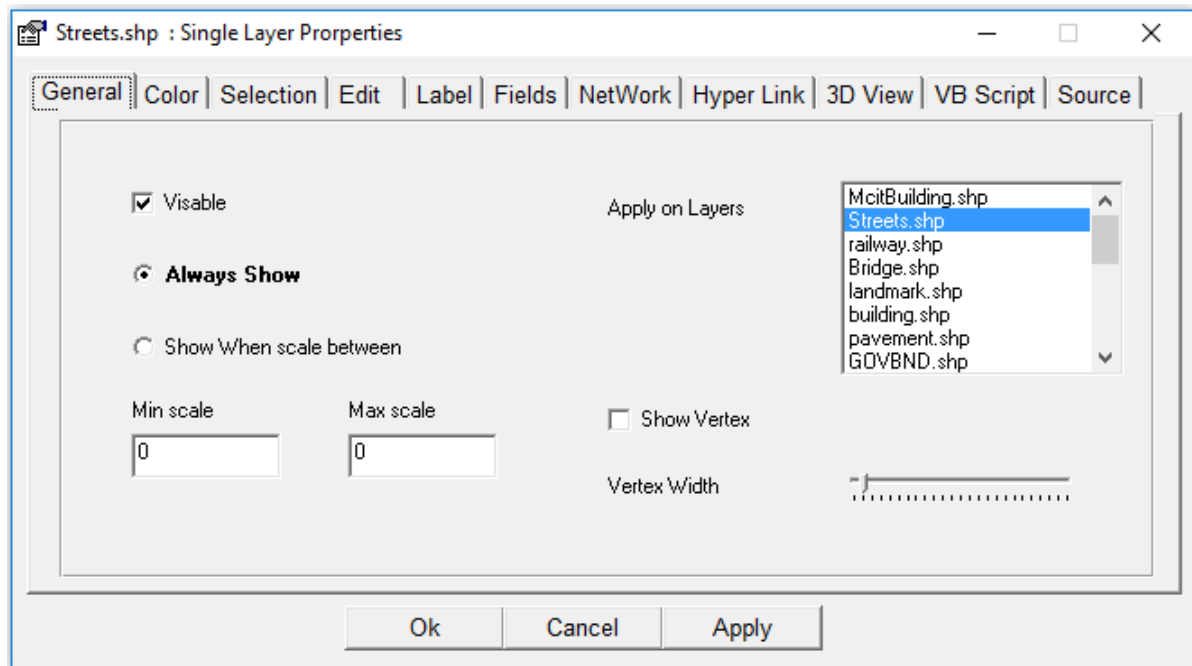

Converting Shape Type and Grouping

Menu → Tools → Convert Shape Type and Grouping

- Select Destination Layer
- Select Criteria (All Feature or Inside Selected Features or Outside Selected Features)
- Select Output Shape File
- Select Output Shape File Type
- Select Group By or Not
- Select Summing Numerical Fields or Not
- Select Group By Field

4) Layer Properties

A) Layer Properties General Option

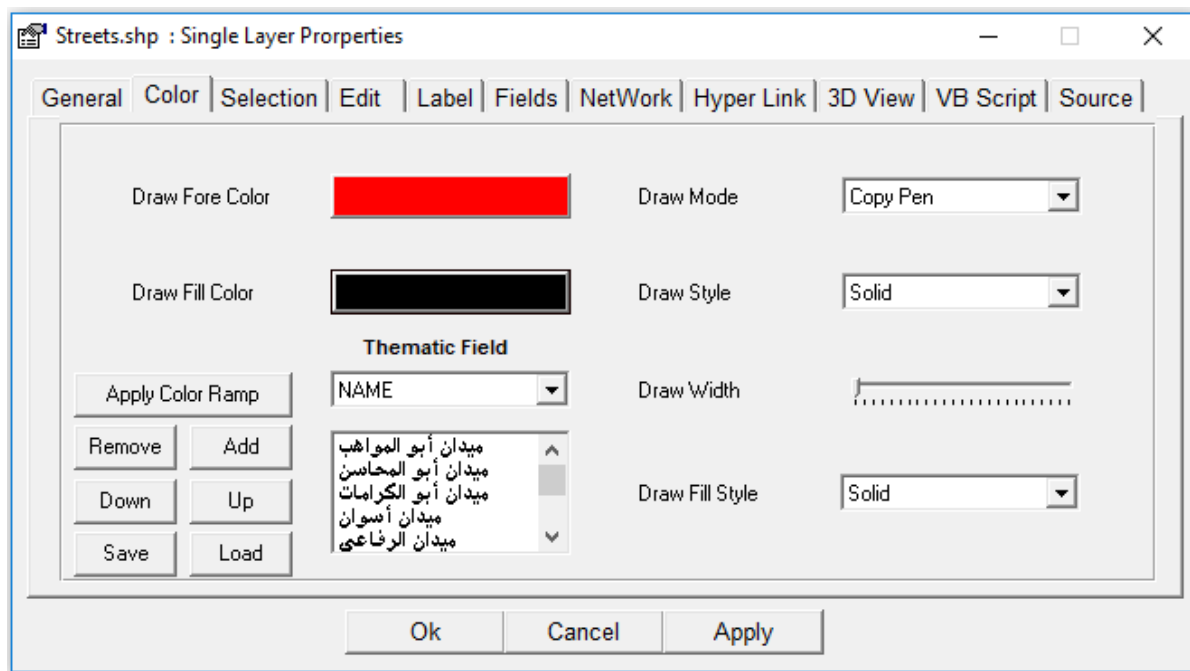

Layer Properties General Option

Menu → Layers → Layer Properties → General

- Select Visible or not
- Select on which Layers, your selection will be applied
- Select Show Vertex or Not
- Select Vertex Width
- Select Always show to view the layer all the time
- Select Show When Scale between Min Scale and Max Scale

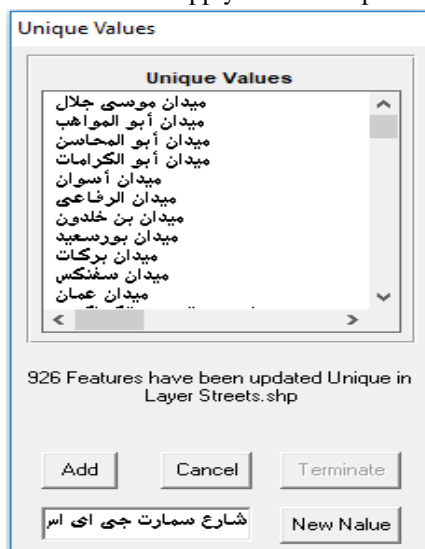

B) Layer Properties Color Option

Layer Properties Color Option

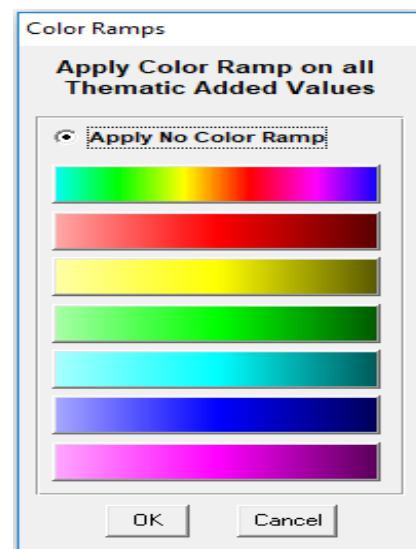

Menu → Layers → Layer Properties → Color

- Select Draw Fore Color and Draw Fill Color
- Select Draw Mode
- Select Draw Style
- Select Draw Width
- Select Draw Fill Style
- Select Thematic Field and add Values and select each Value Colors, Mode, Style
- Select Apply Color Ramp to change colors of all added values

Layer Properties Color Option: Add Thematic Value

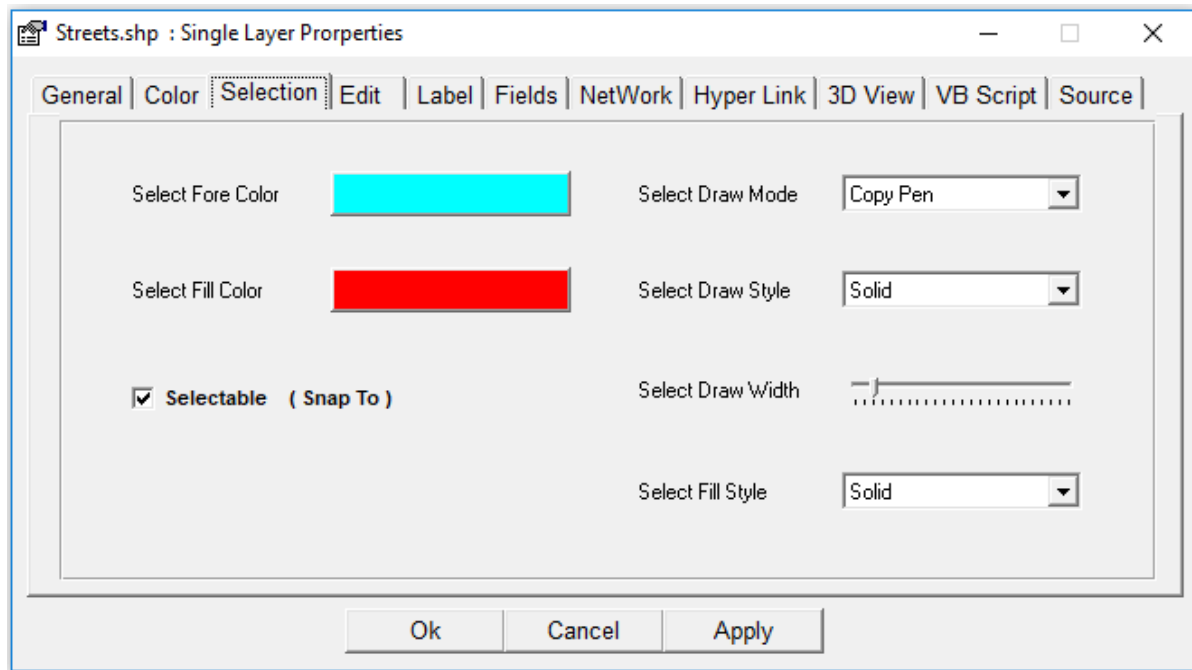

Menu → Layers → Layer Properties → Color → Add

Layer Properties Color Option : Apply Color Ramp on Added Value

Menu → Layers → Layer Properties → Color → Apply Color Ramp

C) Layer Properties Selection Option

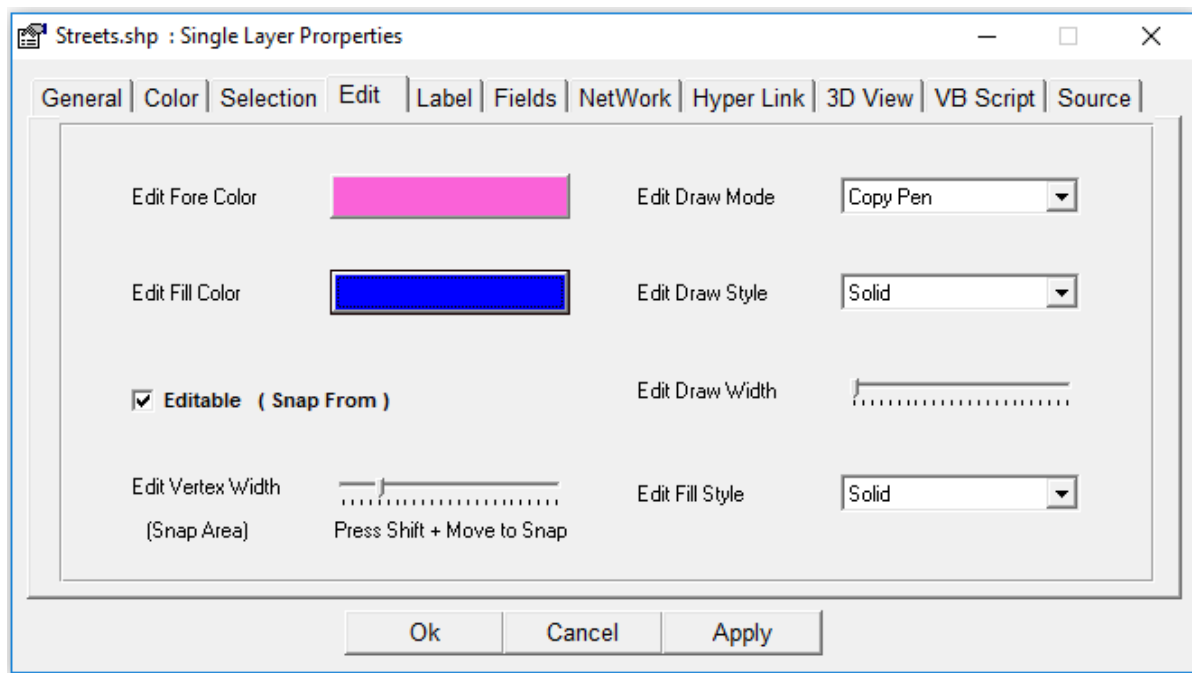

Layer Properties Selection Option

Menu → Layers → Layer Properties → Selection

- Select Selection Fore Color
- Select Selection Fill Color
- Select Selection Mode
- Select Selection Style
- Select Selection Width
- Select Selection Fill Style
- Select Selectable (Snap to) or Not

D) Layer Properties Edit Option

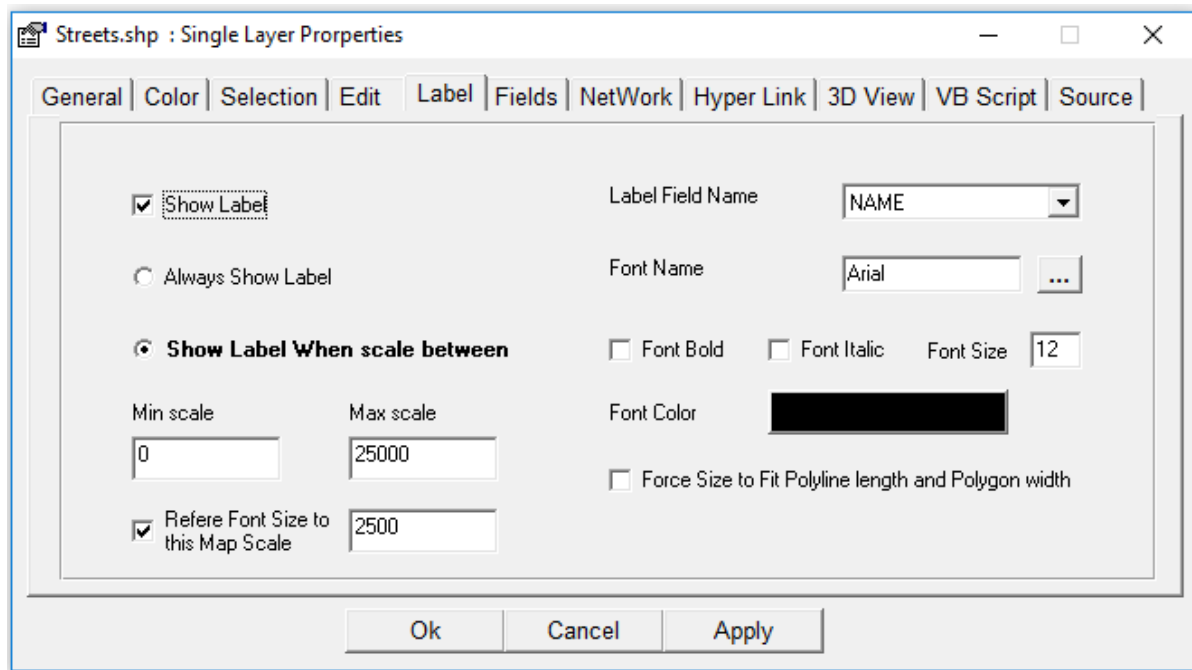

Layer Properties Edit Option

Menu → Layers → Layer Properties → Edit

- Select Edit Fore Color
- Select Edit Fill Color
- Select Edit Mode
- Select Edit Style
- Select Edit Width
- Select Edit Fill Style
- Select Editable (Snap From) or Not
- Select Edit Vertex Width (Snap Area)

E) Layer Properties Label Option

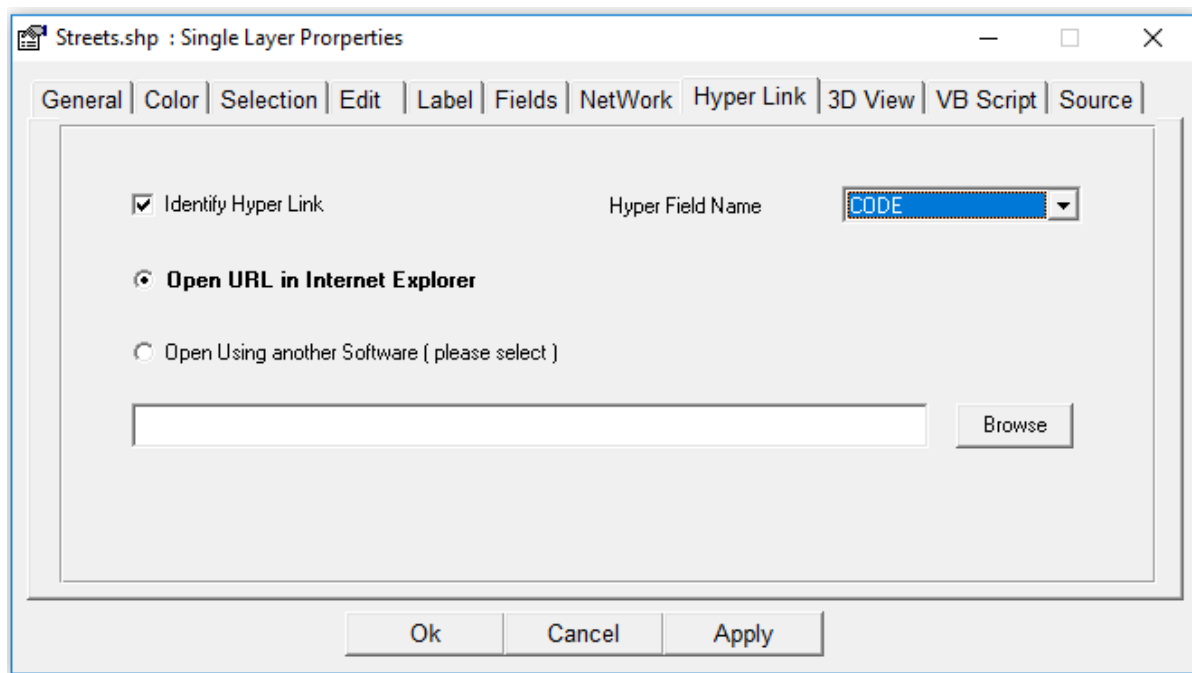

Layer Properties Label Option

Menu → Layers → Layer Properties → Label

- Select Show Label or Not
- Select Label Field Name
- Select Label Font
- Select Label Fore Color
- Select Always show to view the layer all the time
- Select Show When Scale between Min Scale and Max Scale
- Select Refer Label Font Size to this Map Scale
- Select Force Label Size to Fit Polyline length and polygon width

F) Layer Properties Hyper Link Option

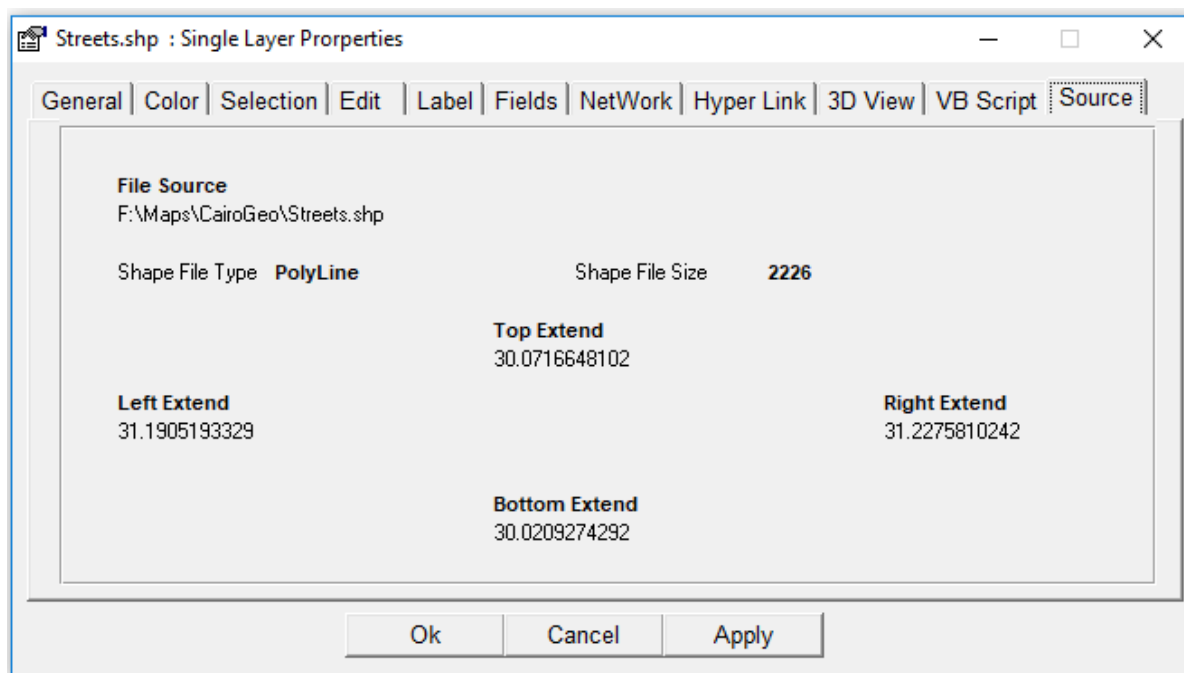

Layer Properties Hyperlink Option

Menu → Layers → Layer Properties → Label

- Select Identify Hyperlink or Not
- Select Hyperlink Field Name
- Select Open URL in Internet Explorer
- Select Open Using another Software (Please Select)

G) Layer Properties Source Option

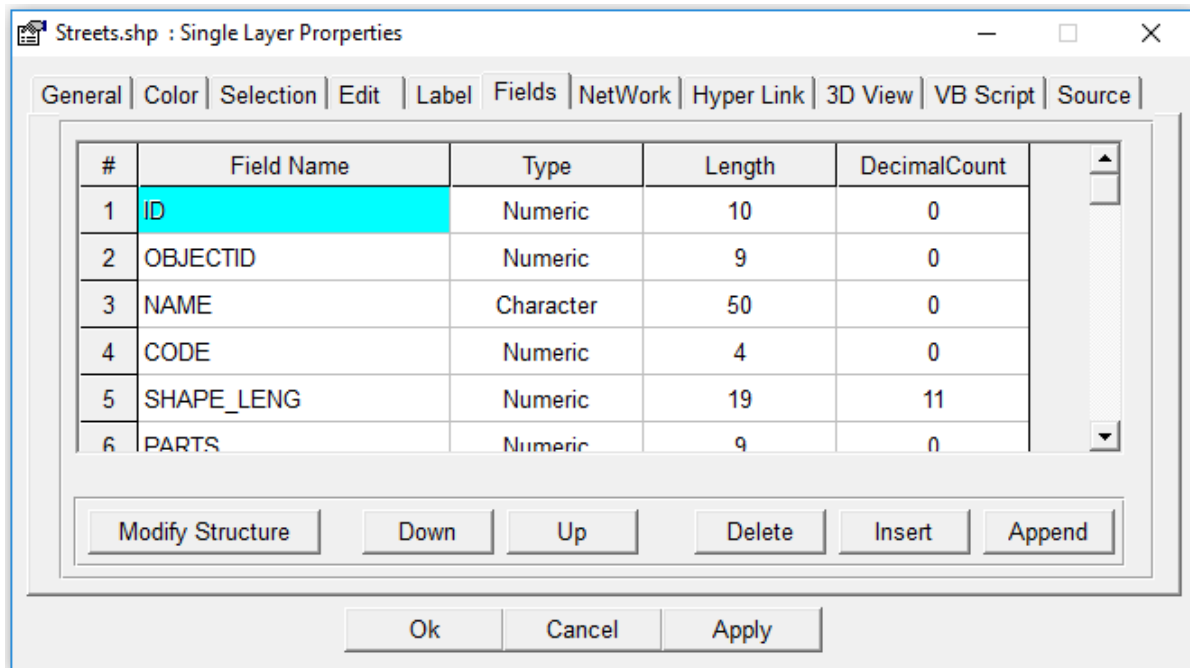

Layer Properties Source Option

Menu → Layers → Layer Properties → Source

5) Attribute Data Table

A) Modifying Dbf File Data Structure

Layer Properties Fields Option

Menu → Layers → Layer Properties → Fields

- Press Append Button to add new field at end of fields list
- Press Insert Button to add new field above of the selected Field
- Press Delete Button to delete the selected field
- Press Up Button to move Selected Field Up
- Press Down Button to move Selected field Down
- In the Field Name Columns, type a Unique Field Name
- In the Type Columns, Select (Character or Date or Logic or Numeric)
- In the length Columns, Enter the field Length
- In the Decimal Count Columns, Enter the number of Decimal digits
- Press Modify Structure Button to apply the Field Modification

B) Editing Data Table

Streets.shp : Data Table			
Record	NAME	CODE	SHAPE_LENGTH
1	كويرى 15 مايو	10	326535.700121
2	كويرى 15 مايو	10	326535.700121
3	شارع السرايا	1	326535.700121
4	شارع محمود حبيش	0	326535.700121
5	شارع سامح احمد السيد	0	326535.700121
6	شارع العمال	0	326535.700121
7	شارع ابو المزم	0	326535.700121
8	شارع يوسف منصور	0	326535.700121
9	شارع نرعة المجنونة - صالح صبيحي	0	326535.700121
10	شارع حسن عبد اللطيف	0	326535.700121
11		0	326535.700121
12	شارع محمود عبد اللطيف	0	326535.700121
13	شارع محمد مرسى	0	326535.700121
14	شارع يوسف البندارى	0	326535.700121
15	شارع اولاد حتران	0	326535.700121
16	شارع عبد العال السوهاجى	0	326535.700121
17	شارع عبد الرحيم القنان	0	326535.700121
18	شارع القالوجا	0	326535.700121
19	شارع على عبد الحليم البهي	0	326535.700121

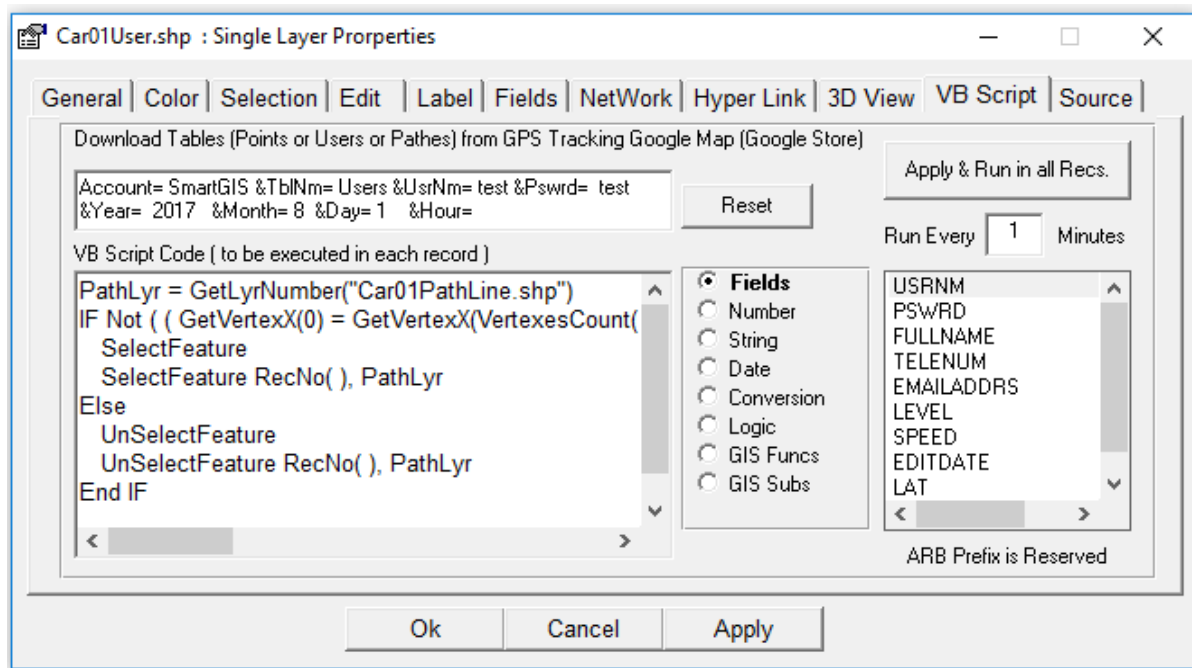

Selected Records = (0 out of total 2226 Records)

Editing Data Table

Menu → Layers → Data Table

- Undo Data Edit
- Redo Data Edit
- Select Features
- Unselect Features
- Delete Features
- Undelete Features
- Edit Feature Data
- Cut Cells
- Copy Cells
- Past Cells
- Fill Past
- Fill Series
- Clear Cells
- Sort Rows Ascending
- Sort Rows Descending

C) Running VB script in Data Table Fields

Layer Properties VB Script Option

Menu → Layers → Layer Properties → VB Script

- Select Fields for Fields Name List
- Select Number for VB Number Functions List
- Select String for VB String Functions List
- Select Date for VB Date Functions List
- Select Conversion for VB Conversion Functions List
- Select Logic for VB Logic Functions List
- Select GIS Funcs for GIS Functions List
- Select GIS Subs for GIS Procedures List
- Press Apply & Run in All records
- Note that "ARB" Prefix is Reserved
- Select Run VB Script from File (to Load and Run External VB Script file)

D) Editing One Feature (Record)

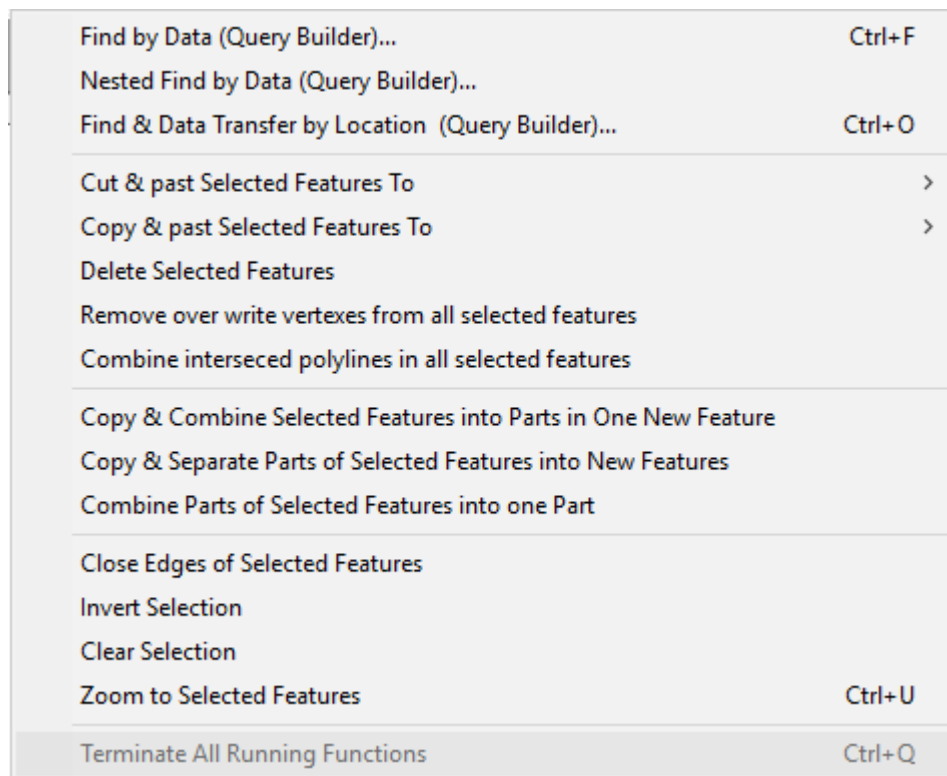

Streets.shp : Edit Feature	
File	Edit
VB Script	Help
RecNo	1
ID	0
OBJECTID	2228
NAME	کوبری 15 مایو
CODE	10

PARTS	1

Edit Feature

Menu → Edit → Edit Feature Data

6) GIS Analysis and Selection

A) Selection Menu

Selection Menu

Menu → Selection

B) Nested Attribute Data Base Analysis and Selection

Nested Selection Find By Data (Query Builder)

Menu → Selection → Nested Find By Data (Query Builder)

- Select Layer Name
- Select Criteria (All Feature or Inside Selected Features or Outside Selected Features)
- Select Method (New Selection or Add to Selection or Clear from Selection)
- Select Fields from the Fields Lists
- Select Values
- Select Map Scale for viewing result
- Press Find to Start Searching the selected values

C) Spatial Location Analysis and Selection

Find and Data Transfer by Location

Find in: Streets.shp Find

Criteria: All Features

Method: New Selection Terminate

Relation: Inside or Intersect

Criteria: All Features

To Layer: Streets.shp

☒ Apply Tolerance

Tolerance: 0.0000001 Map Units (1 Meter = almost 0.00001 Decimal Degree)

☒ Apply Data Transfer by Location for Checked Similar Fields Names

From layer : Streets.shp

To layer : Streets.shp

☐ ID ☐ PARTS

☐ OBJECTID

☐ NAME

☐ CODE

☐ SHAPE_LENGTH

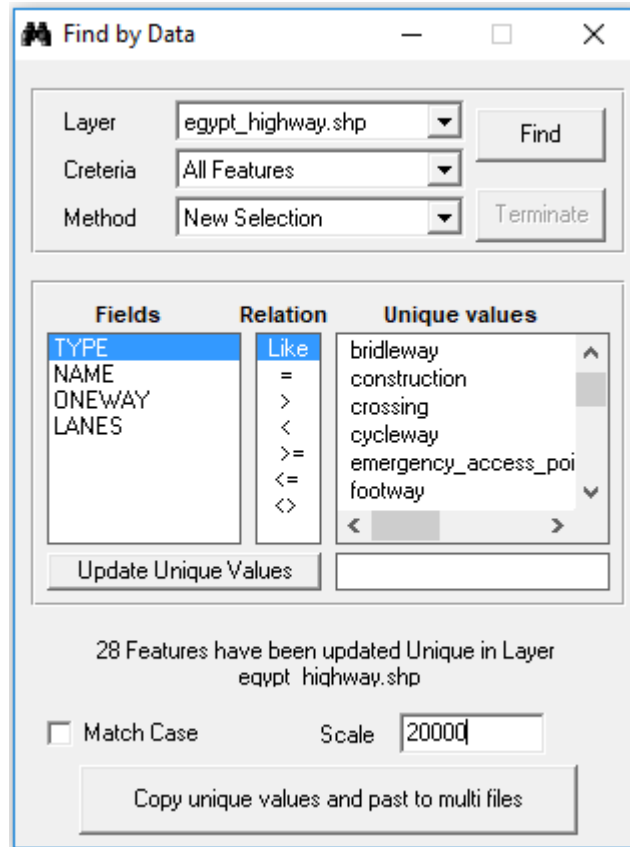

Note :
Data Transfer is a very powerfull tool, So please use it carefully. To undo Data Transfer, Do not Save Changes and Reload layer from layers menu

Selection Find and Data Transfer By Location (Query Builder)

Menu → Selection → Find and Data Transfer By Location (Query Builder)

- Select Layer Name
- Select Criteria (All Feature or Inside Selected Features or Outside Selected Features)
- Select Method (New Selection or Add to Selection or Clear from Selection)
- Select Relation
- Select Relation to Layer
- Select Apply Tolerance or not
- Select Tolerance value
- Select Apply Data Transfer for Similar Fields Name or not
- Select Data Transfer Fields Names
- Press Find to Start Searching

D) Attribute Data Base Analysis and Selection

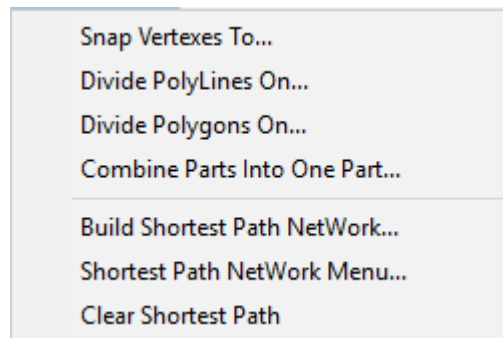

Selection Find By Data (Query Builder)

Menu → Selection → Find By Data (Query Builder)

- Select Layer Name
- Select Criteria (All Feature or Inside Selected Features or Outside Selected Features)
- Select Method (New Selection or Add to Selection or Clear from Selection)
- Select Field from the Fields List
- Select Relation from the Relation List
- Press Update Unique Value to get all available values
- Select Value from the List or write it
- Select Match Case or not
- Select Map Scale for viewing result
- Press Find to Start Searching the selected value

7) GIS Network Analysis

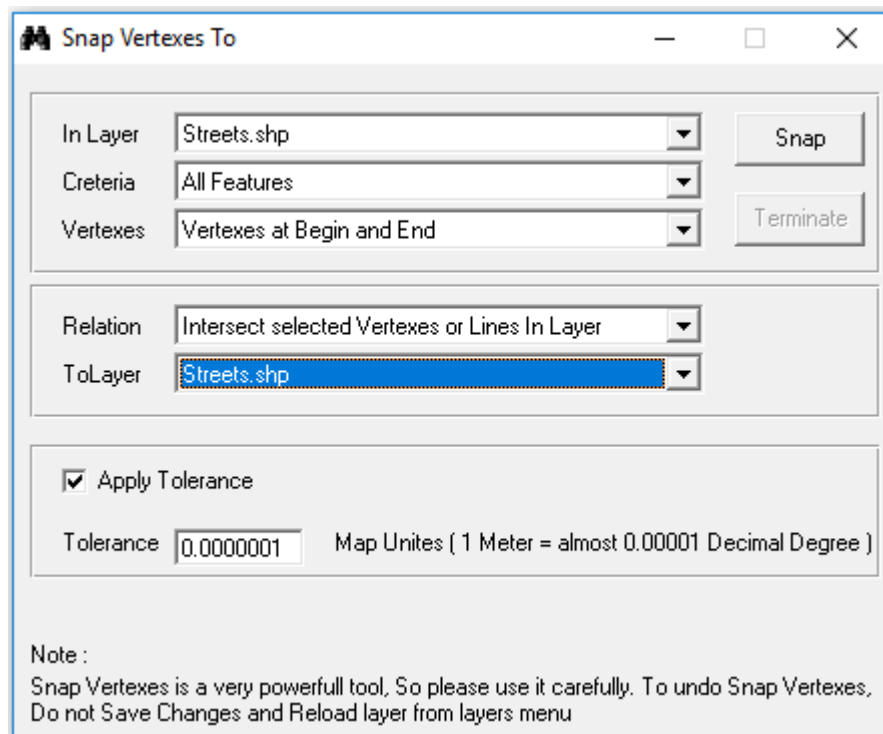

A) Network Menu

Network Menu

Menu → Network

B) Snap Vertexes to

Network Snap Vertexes to

Menu → Network → Snap Vertexes to

- Select Layer Name
- Select Criteria (All Feature or Inside Selected Features or Outside Selected Features)
- Select Vertices (All , OR (Begin & End))
- Select Relation
- Select Relation to Layer
- Select Apply Tolerance or not
- Select Tolerance value

C) Divide PolyLines On

Divide PolyLines On

PolyLine Layers:

Criteria:

Relation:

To Layer:

☒ Apply Tolerance

Tolerance: Map Unites (1 Meter = almost 0.00001 Decimal Degree)

Note :
Divide PolyLines is a very powerfull tool, So please use it carefully. To undo Divide PolyLines , Do not Save Changes and Reload layer from layers menu

Network Divide PolyLines on

Menu → Network → Divide PolyLines on

- Select Layer Name
- Select Criteria (All Feature or Inside Selected Features or Outside Selected Features)
- Select Vertexes (All , OR (Begin & End))
- Select Relation
- Select Relation to Layer
- Select Apply Tolerance or not
- Select Tolerance value

D) Divide Polygons On

Divide Polygons On

Polygon Layers:

Criteria:

Relation: **2 Segments Intersect selected features in Layer**

To Layer:

☒ Apply Buffer

Buffer: Map Unites (1 Meter = almost 0.00001 Decimal Degree)

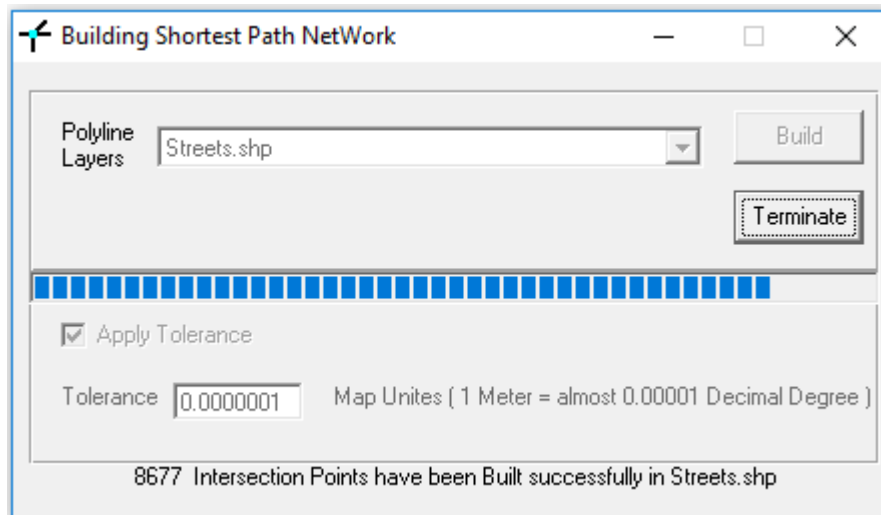

Note :
Divide Polygons is a very powerfull tool, So please use it carefully. To undo Divide Polygons , Do not Save Changes and Reload layer from layers menu

Network Divide PolyLines on

Menu → Network → Divide Polygons on

- Select Layer Name
- Select Criteria (All Feature or Inside Selected Features or Outside Selected Features)
- Select Vertexes (All , OR (Begin & End))
- Select Relation
- Select Relation to Layer
- Select Apply Tolerance or not
- Select Tolerance value

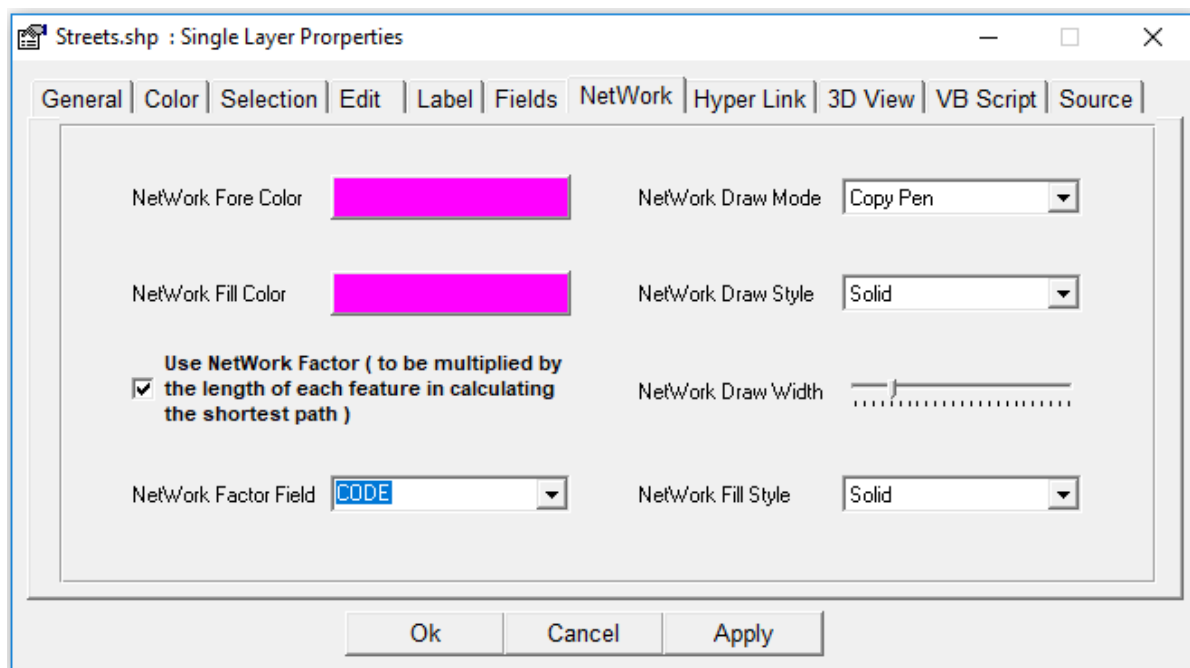

E) Network Build Shortest Path

Building Shortest Path Network

Menu → Network → Build Shortest Path Network

F) Layer Properties Network Option

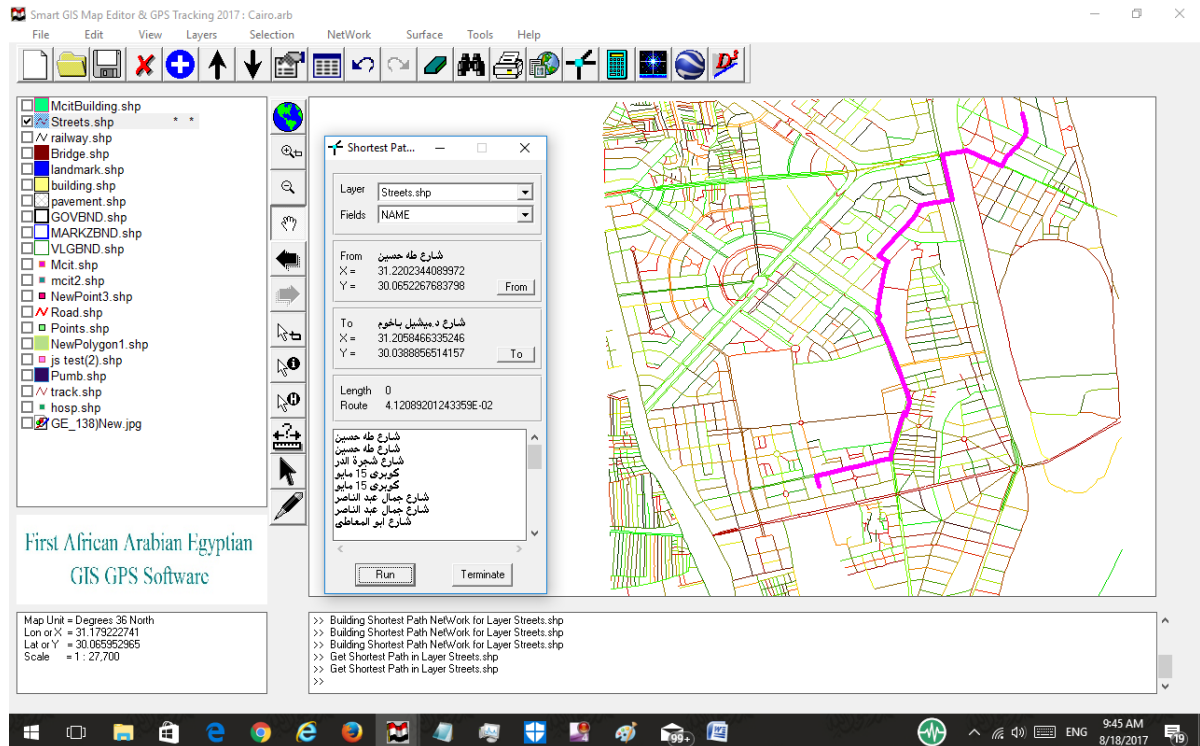

Layer Properties Selection Option

Menu → Layers → Layer Properties → Selection

- Select Network Fore Color
- Select Network Fill Color
- Select Network Mode
- Select Network Style
- Select Network Width
- Select Network Factor (to be used) or Not
- Select Network Factor Field

G) Network Build Shortest Path

Shortest Path Network

Menu → Network → Shortest Path Network

- Select Layer Name
- Select Field Name
- Press From Button
- Select on the map where to start
- Press To Button
- Select on the Map where to Go
- Press Run

8) Surface Analysis

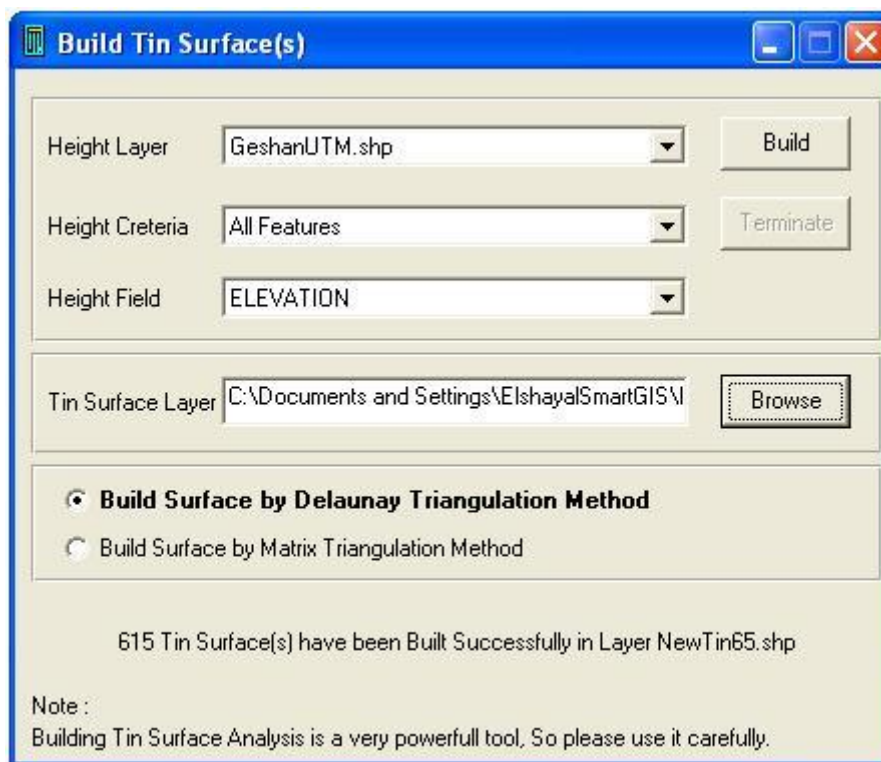

A) Surface Menu

Surface Menu

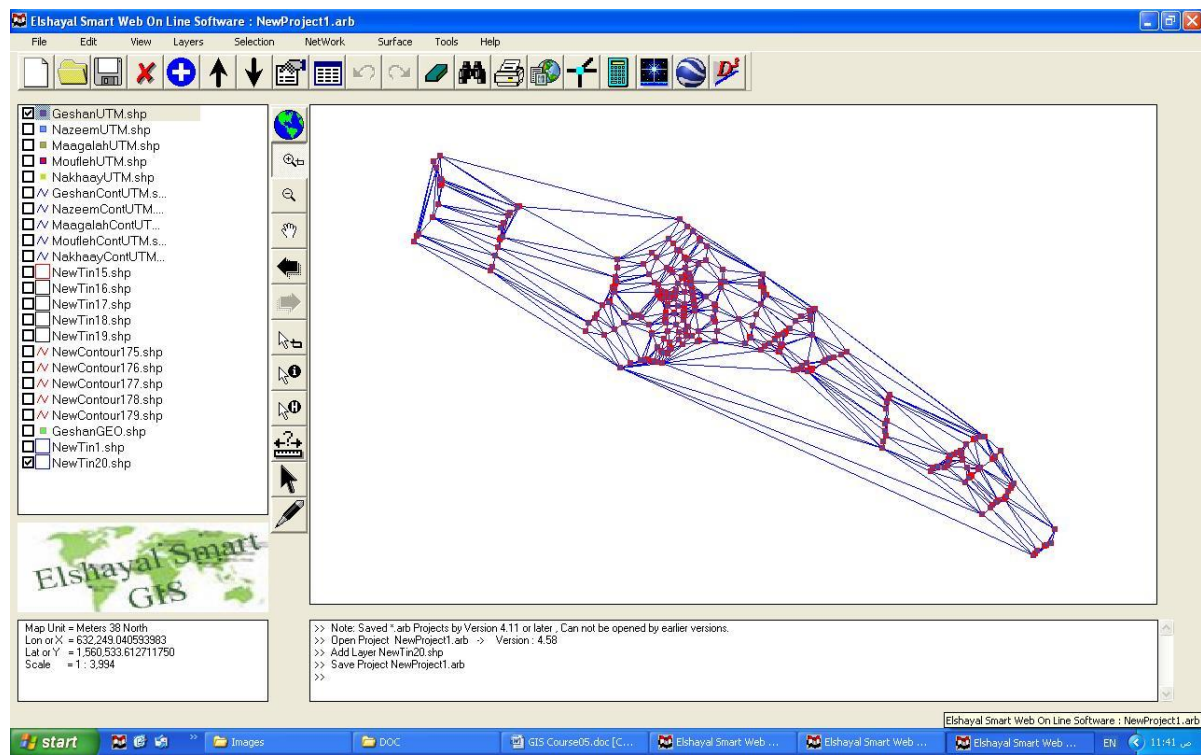

Menu → Surface

B) Building Tin Surface Analysis

Menu → Surface → Building Tin Surface(s) Analysis

- Select Height Layer Name
- Select Height Criteria (All Feature or Inside Selected Features or Outside Selected Features)
- Select Height Field
- Select Output Tin Surface Shape file name
- Select Build Surface by Delaunay, if elevation points have unequal distances among them.
- Select Build Surface by Matrix, if elevation points have equal distances among them.
- Press Build

C) Building Contours Surface(s) Analysis

Contour Surface(s) Analysis

Height Layer:

Height Criteria:

Height Field:

Contour Interval: Unit (s)

Base Contour: Unit (s)

Contour Layer:

☒ **Build Surface by Delaunay Triangulation Method**

☐ Build Surface by Matrix Triangulation Method

☐ Do not Build Surface, and Use Height Layer as Surface

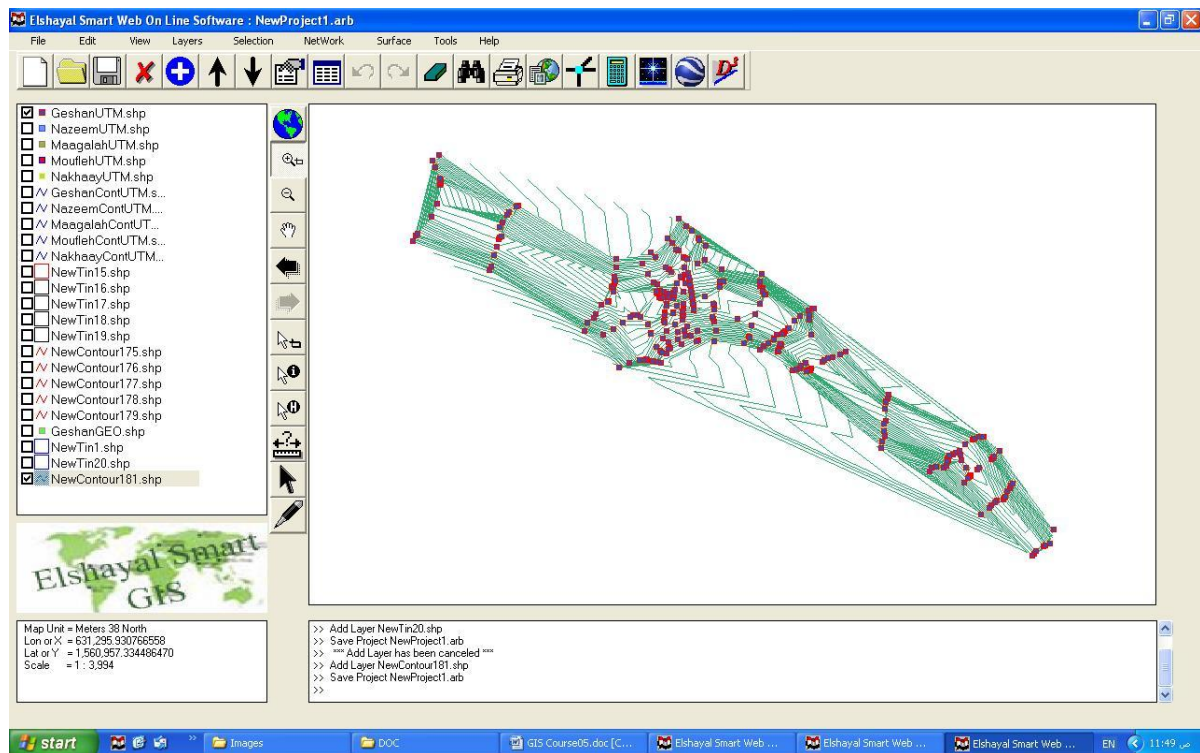

68 Countours have been Built Successfully to Layer NewContour3.shp

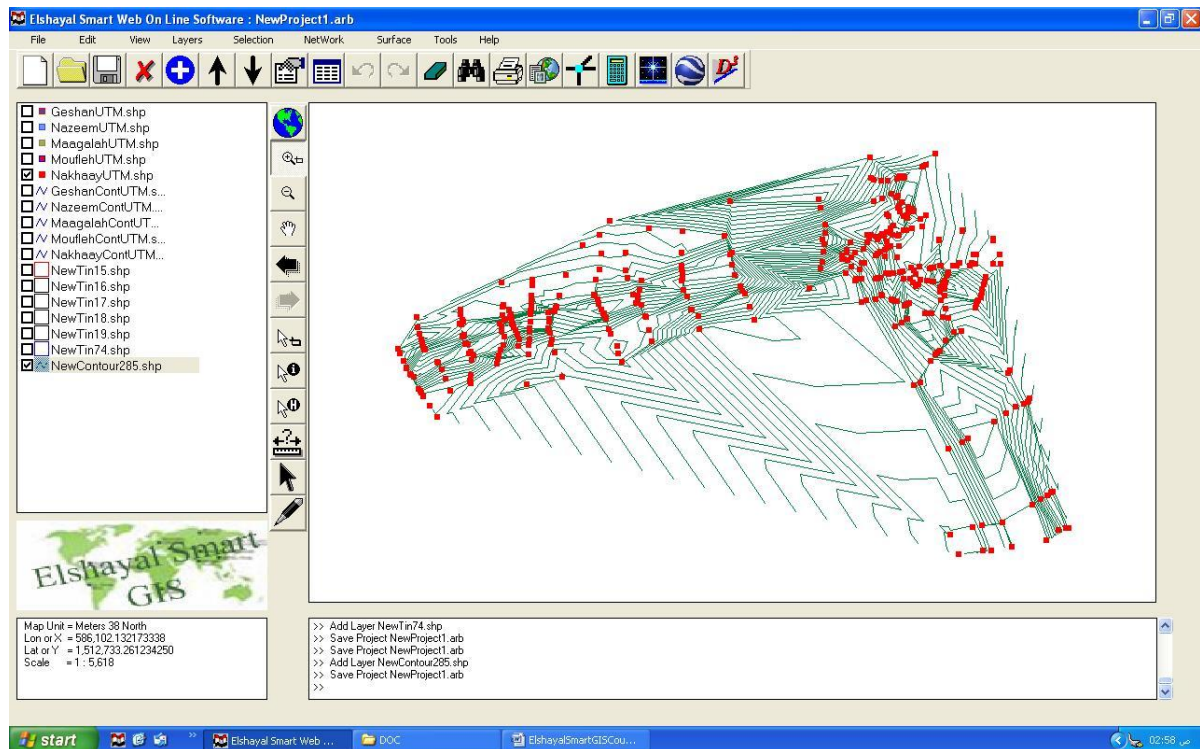

Note :
Contour Surface(s) Analysis is a very powerfull tool, So please use it carefully.

Building Contours Surface(s) Analysis

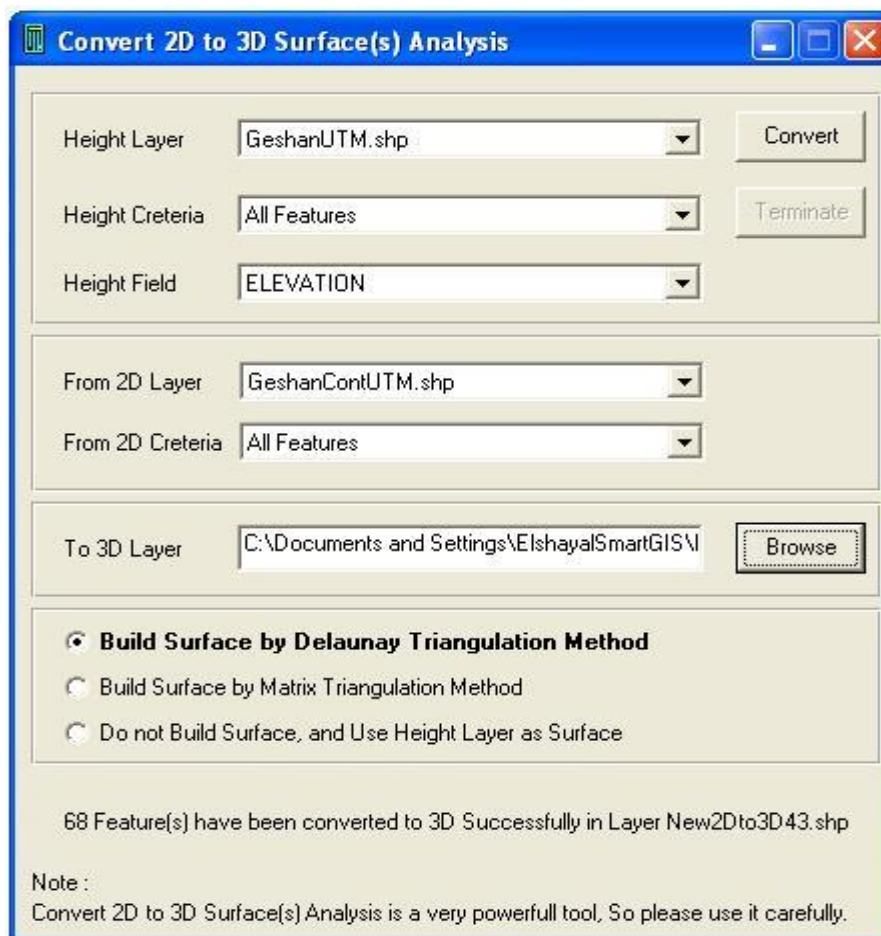

Menu → Surface → Building Contours Surface(s) Analysis

- Check Use Height Layer as Tin Surface or Not
- Select Height Layer Name
- Select Height Criteria (All Feature or Inside Selected Features or Outside Selected Features)
- Select Height Field
- Select Contour Interval
- Select Base Contour
- Select Output Contour Shape file name
- Select Build Surface by Delaunay, if elevation points have unequal distances among them.
- Select Build Surface by Matrix, if elevation points have equal distances among them.
- Select Do not build Surface, if Height layer is a Tin Surface
- Press Build

D) Converting 2D to 3D Surface Analysis

Menu → Surface → Converting 2D to 3D Surface Analysis

- Check Use Height Layer as Tin Surface or Not
- Select Height Layer Name
- Select Height Criteria (All Feature or Inside Selected Features or Outside Selected Features)
- Select Height Field
- Select Destination 2D GIS Shape File
- Select Criteria of the Destination 2D GIS Shape File
- Select Output 3D Shape file name
- Select Build Surface by Delaunay, if elevation points have unequal distances among them.
- Select Build Surface by Matrix, if elevation points have equal distances among them.
- Select Do not build Surface, if Height layer is a Tin Surface
- Press Convert

E) Calculating Area and Volume of Surface(s)

Calculate Area and Volume of Surface(s)

Height Layer: GeshanUTM.shp Calculate

Height Criteria: All Features Terminate

Height Field: ELEVATION

Height of Plane: 0

☒ Above Plane ☐ Below Plane

Min Height	=	1,953.895
Max Height	=	1,994.675
2D Area	=	106,187.028
3D Surface	=	117,016.211
Volume	=	209,684,094.385

☒ **Build Surface by Delaunay Triangulation Method**

☐ Build Surface by Matrix Triangulation Method

☐ Do not Build Surface, and Use Height Layer as Surface

615 Area and Volume Surface(s) have been Calculated Successfully in Layer GeshanUTM.shp

Note : Calculate Area and Voume of Surface(s) is a very powerfull tool, So please use it carefully.

Calculate Area and Volume of Surface(s)

Menu → Surface → Calculate Area and Volume of Surface(s)

- Check Use Height Layer as Tin Surface or Not
- Select Height Layer Name
- Select Height Criteria (All Feature or Inside Selected Features or Outside Selected Features)
- Select Height Field
- Select Height of the Calculating Plane
- Select above Plane or Below Plane
- Select Build Surface by Delaunay, if elevation points have unequal distances among them.
- Select Build Surface by Matrix, if elevation points have equal distances among them.
- Select Do not build Surface, if Height layer is a Tin Surface
- Press Calculate

F) Downloading (ASTER and SRTM) NASA Geo DEM Height Files

Open your Internet browser and go to the following URL to Download ASTER Geo DEM
<http://www.gdem.aster.ersdac.or.jp/search.jsp>

Open your Internet browser and go to the following URL to Download SRTM height files
http://dds.cr.usgs.gov/srtm/version2_1/SRTM3/

G) Convert (ASTER and SRTM) NASA Geo DEM Height Files to Tin Shape File

Convert (ASTER & SRTM) DEM to Tin Shape file

DEM File: D:\World_Maps\Height\ASTER\ASTGTM_N12E0 [Browse]

Lon: 44 Lat: 12 Interval: 1 Arc Seconds No. of Points: 3601

☒ Clip

Lon (dd) Lat (dd)

Left - Top: 44 13

Right - Bottom: 45 12

No. of Clip Points: 12967201

[Convert] [Terminate]

Note :
Convert (ASTER & SRTM) DEM to Tin Shape file is Producing Tin of Elevation Points

Advanced Spaceborne Thermal Emission and Reflection Radiometer (ASTER)
<http://www.gdem.aster.ersdac.or.jp/search.jsp> 1 Arc Seconds interval for World

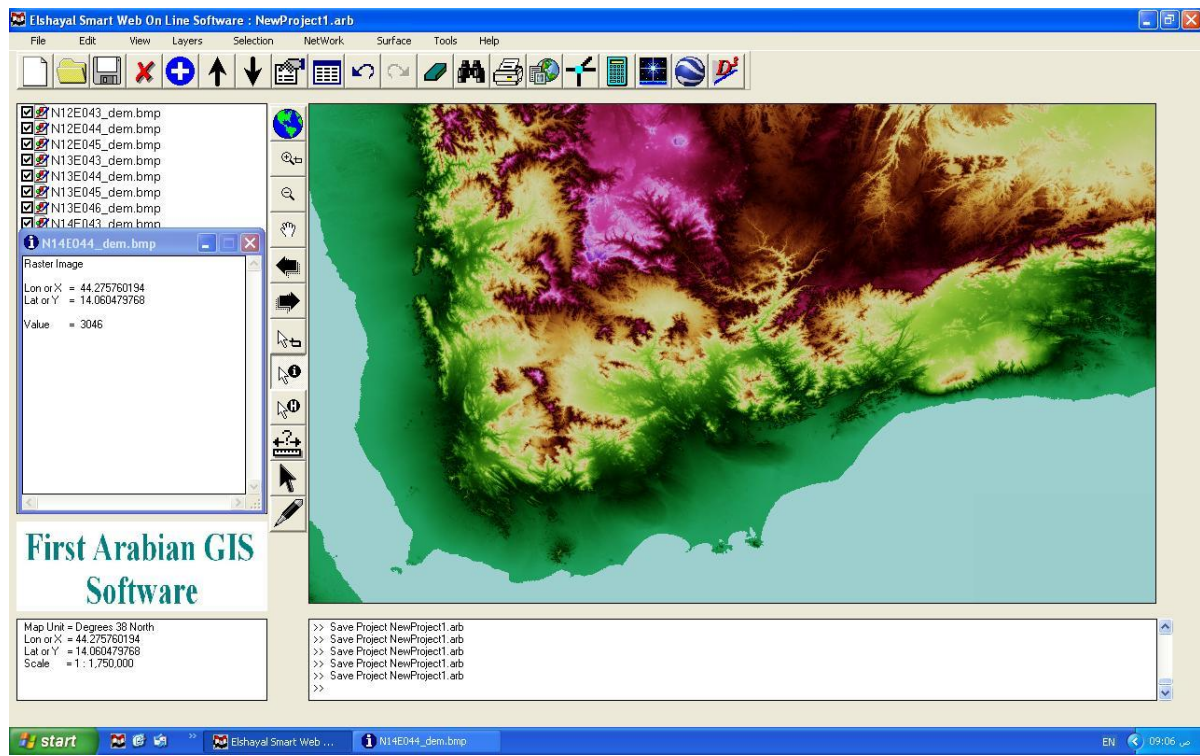

Shuttle Radar Topography Mission (SRTM)
<http://www2.jpl.nasa.gov/srtm/>
http://dds.cr.usgs.gov/srtm/version2_1/SRTM1/ 1 Arc Second interval for USA
http://dds.cr.usgs.gov/srtm/version2_1/SRTM3/ 3 Arc Seconds interval for World

Convert (ASTER & SRTM) DEM to Tin Shape file

Menu → Tools → Convert (ASTER & SRTM) DEM to Tin Shape file

- Download Tiff DEM file from <http://www.gdem.aster.ersdac.or.jp/search.jsp>
- Select and Enter Clip values of your Area Left Top point and Right Bottom point
- Press Convert

H) Convert ASTER NASA Geo DEM to Color value bmp File

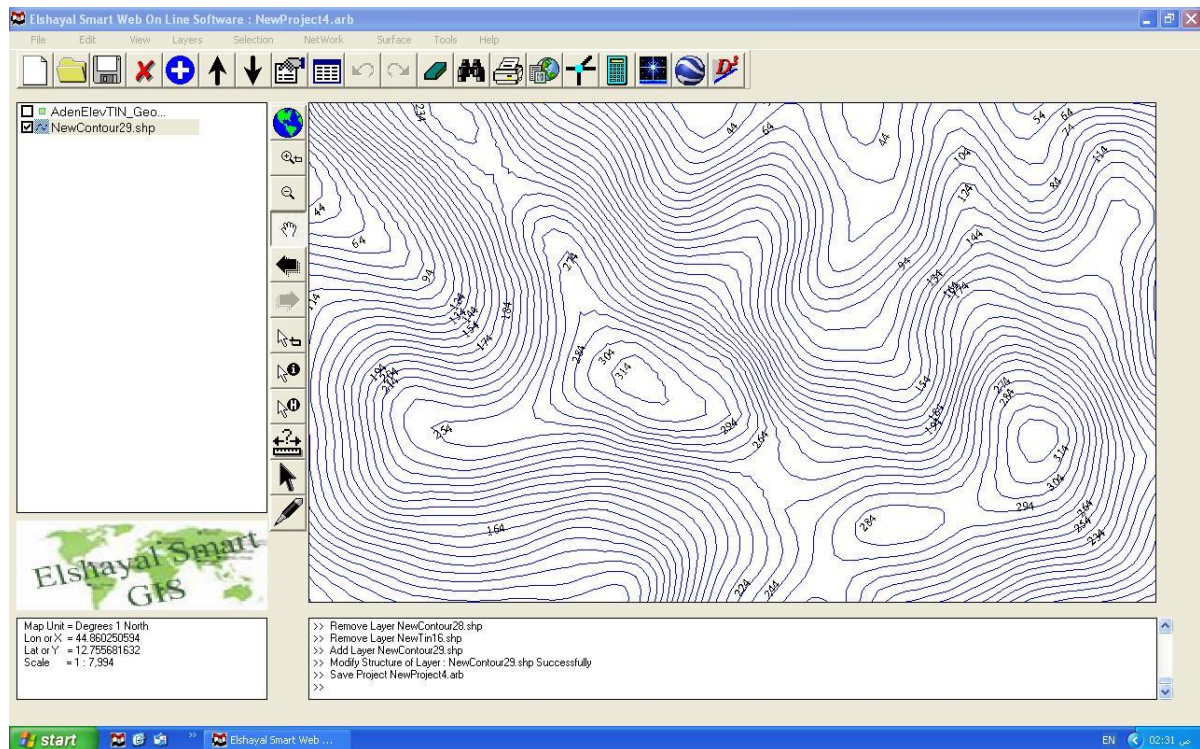

Convert ASTER Geo DEM to Color Value bmp file

Menu → Layers → Add Layer → Files of Type → TIFF → Open

Menu → Layers → Save Layer as → Change the File extension to → BMP → Save

- Open Aster Geo DEM Tiff file
- Save Layer as bmp file
- Press Identify at any point in image to get Elevation value

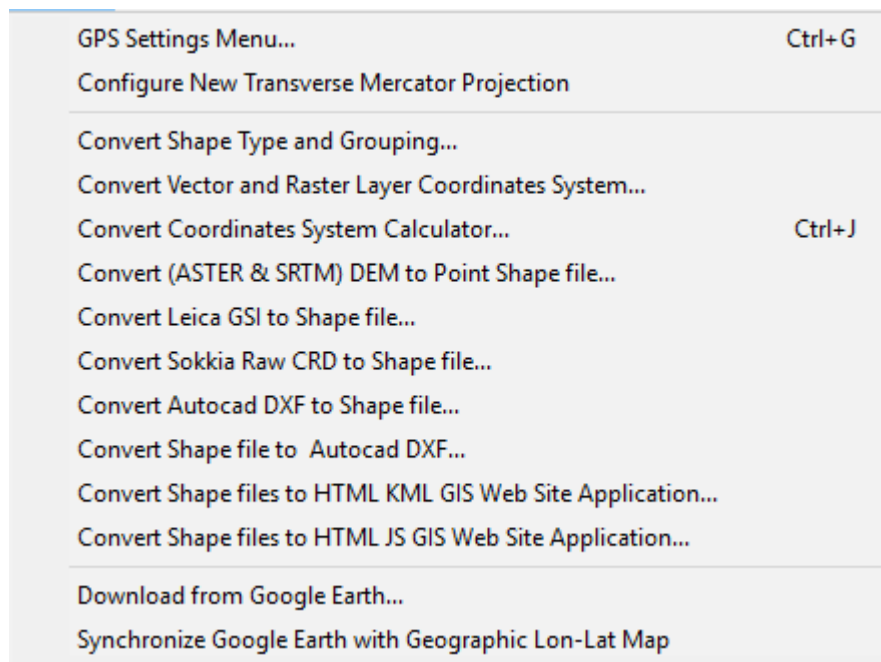

I) Building Contours from ASTER NASA Geo DEM

Menu → Surface → Building Contours Surface(s) Analysis

9) GIS Tools

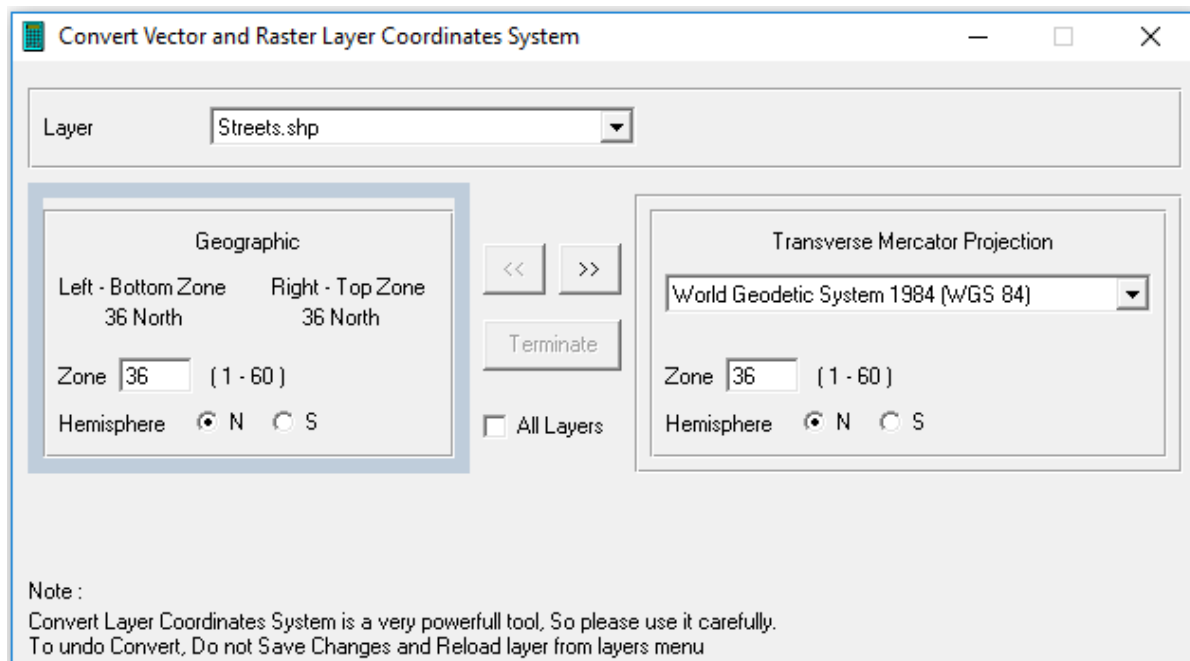

A) Tools Menu

Tools Menu

Menu → Tools

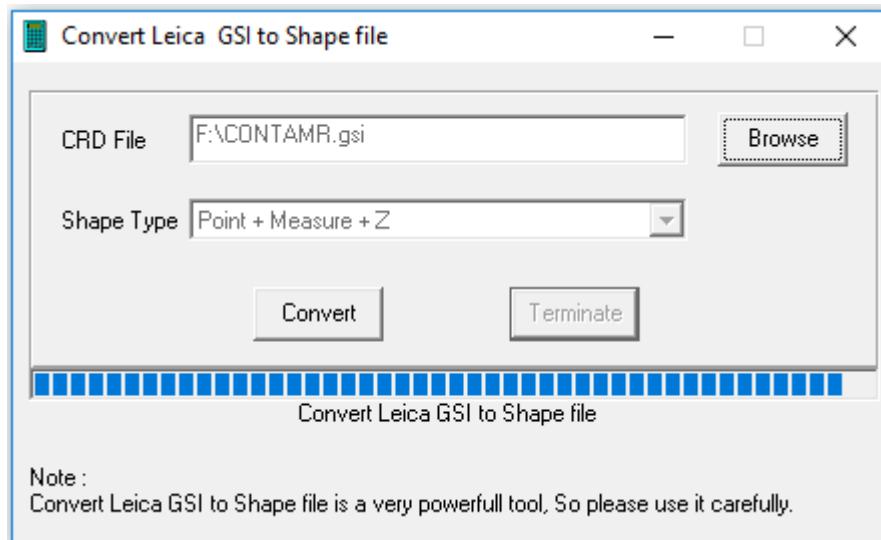

B) Converting Vector and Raster Layers Coordinates System

Converting Vector and Raster Layers Coordinates System

C) Converting Leica GSI files to GIS Shape Files

Converting Leica GSI file to Shape Files

Menu → Tools → Converting Leica GSI file to Shape File

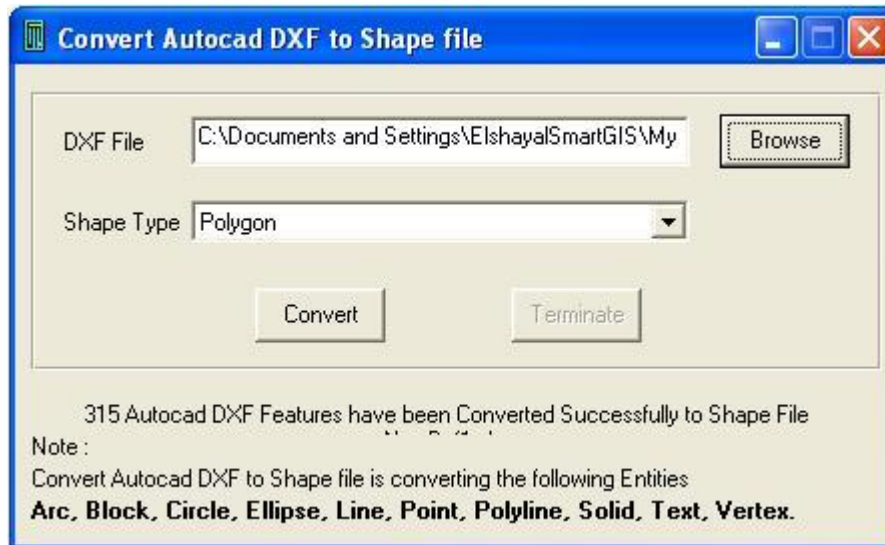

D) Converting Sokkia files to GIS Shape Files

Converting Sokkia file to Shape Files

Menu → Tools → Converting Sokkia file to Shape File

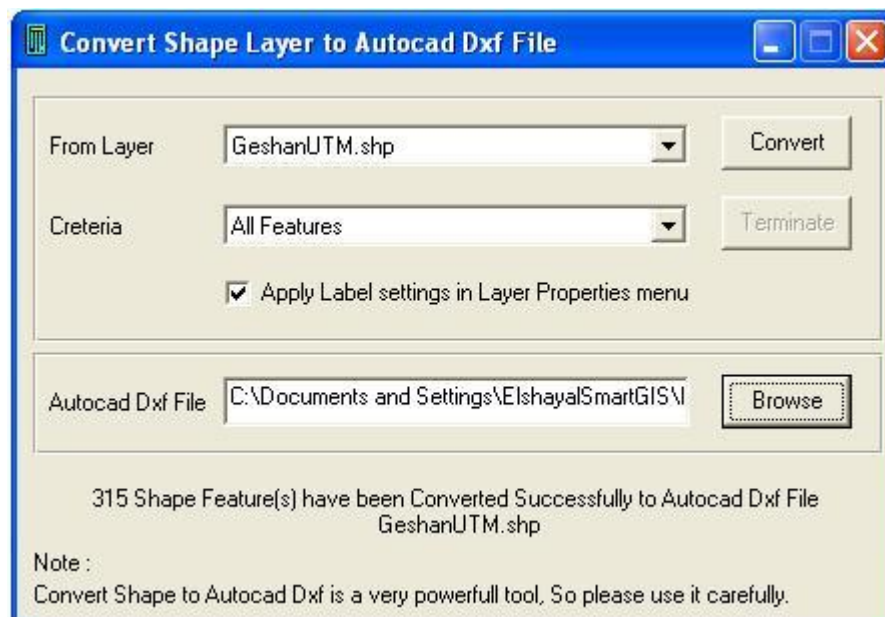

E) Converting AutoCAD files to GIS Shape Files

Converting AutoCAD file to Shape Files

Menu → Tools → Converting AutoCAD file to Shape File

F) Converting GIS Shape Files to AutoCAD files

Converting Shape File to AutoCAD file

Menu → Tools → Converting Shape File to AutoCAD file

G) Converting GIS Shape Files to HTML KML Web GIS Site

Convert Shape files to KML Web GIS Site Module

From Layer: Streets.shp [Convert]

Criteria: All Features [Terminate]

☒ Table Data Thickness: 0.4

Icon URL: https://storage.googleapis.com/mapapi/icons/circle.png

Google KML File: F:\My\Streets.kml [Browse]

Convert All visible Shape files to HTML KML Web GIS Site App.

☒ Table Data Thickness: 0.4 [Convert]

KML Host URL: [Terminate]

Icon URL: https://storage.googleapis.com/mapapi/icons/circle.png

Map Html File: F:\My\index.html [Browse]

Note :
Convert Shape files to HTML KML GIS Web Site Application is a very powerfull tool,
So please use it carefully, and Kindly be sure that you are connected to internet

Converting Shape File to Google KML file

Menu → Tools → Converting Shape File to HTML KML Web GIS Site

H) Converting GIS Shape Files to HTML JS Web GIS Sites

Convert Shape files to HTML JS GIS Web Site

Convert Shape files to Java Script Web GIS Site Module

From Layer: Streets.shp [Convert]

Criteria: All Features [Terminate]

☒ Table Data ☐ Encrypt Shape Thickness: 0.4

Show Layer when Scale between: 1 To 25

Show Label when Scale between: 18 To 25

☐ Icon URL: https://storage.googleapis.com/mapapi/icons/circle.png

Layer JS File: F:\My\Streets.js [Browse]

Convert All visible Shape files to HTML JS Web GIS Site App.

☒ Menu ☒ Table Data ☐ Encrypt Shape Thickness: 0.4

Show Layer when Scale between: 1 To 25 [Convert]

Show Label when Scale between: 18 To 25 [Terminate]

JS Host URL: []

Map Html File: F:\My\index.html [Browse]

Note :
Convert Shape files to HTML JS GIS Web Site Application is a very powerfull tool,
So please use it carefully, and Kindly be sure that you are connected to internet

10) Downloading Google Earth Maps

A) Google Earth Seetings

- Open Google Earth 4.3 or Later Versions (It must be installed in your Computer)
- Inside Google Earth, do the following Settings
- Tools → Options : Turn Off Terrain
- Be Sure that North Arrow is completely very up by
 - View → Show Navigation → Always
 - Press Double Click on North
- Be Sure that Google Earth is very Flat by:
 - Pressing keyboard Shift and keyboard Up Arrow.
 - Pressing Keyboard Ctrl and keyboard down arrow
- Close Google Earth

B) Download Google Earth Maps

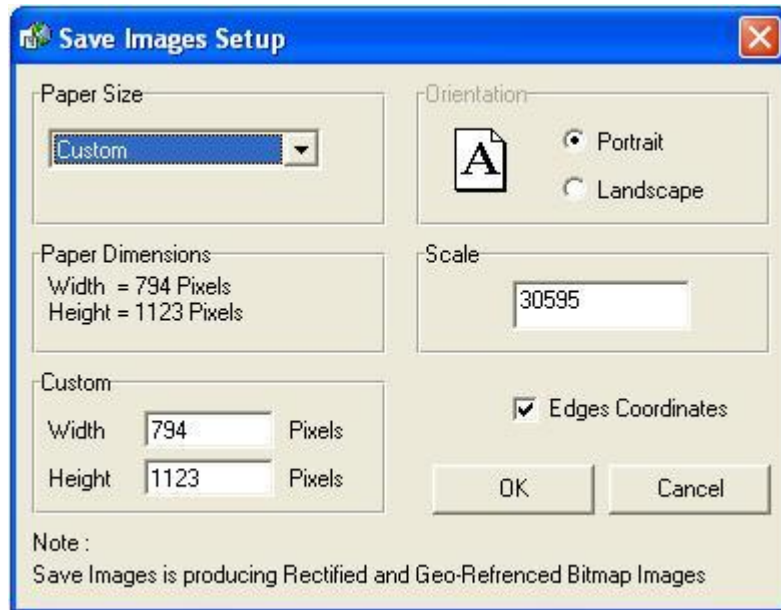

Download From Google Earth

Menu → Tools → Download Form Google Earth

- In GIS Software
- Press Login Google Earth 4.3 or Later Versions (It must be installed in your Computer)
- Press Refresh Cords Button in GIS Software to get Google Earth Position
- Enter Your Lon & Lat Cords' and Scale Zoom
- Press Go to
- Press Import Rectified Image (Will Capture B&W Google Earth Map)
- In Google Earth Software
- Press Save Image to overwrite the B&W Image File
- In GIS Software
- Reload Layer from Layers Menu to get colored rectified Image.
- Use Up, Down, Right, Left Buttons to navigate
- Press "Go to Layer in Google" in Layers Menu (to find layer area in Google)
- Press "Go to Feature in Google" in Edit Manu (to find your area in Google)
- Check Shift Maps, If your Google version is 5 or later

C) Save Map as rectified Images

Save Images Setup

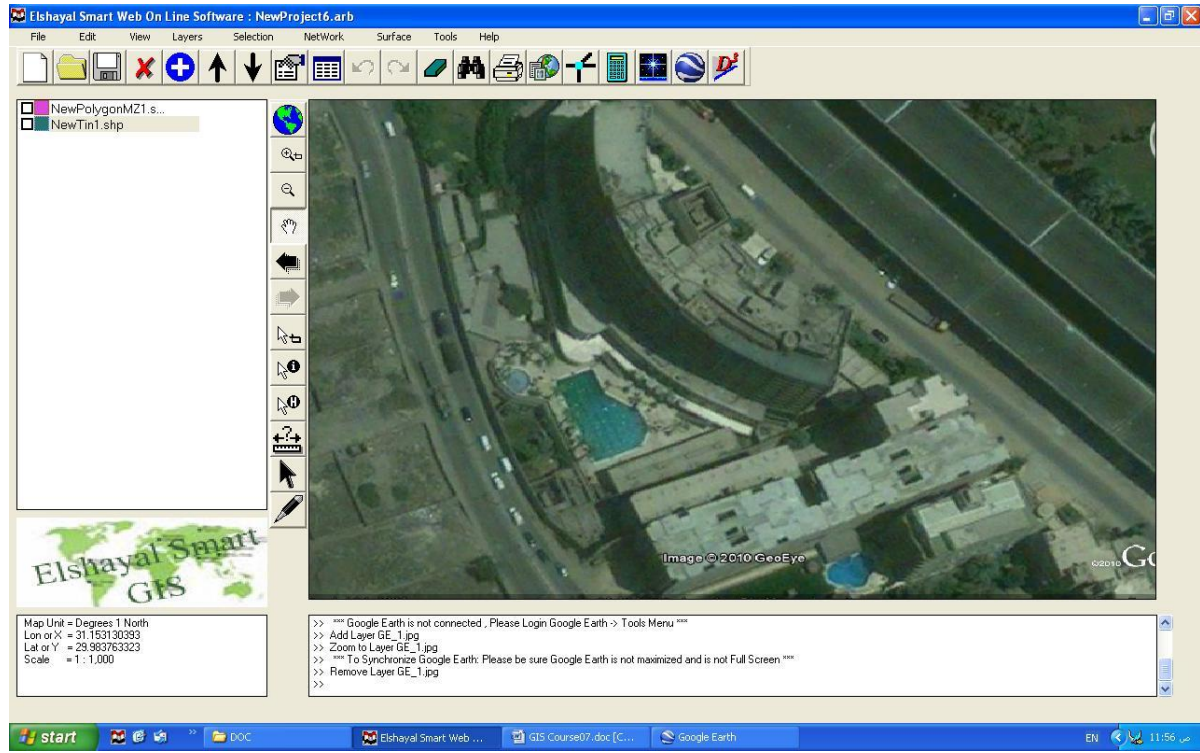

Menu → Files → Save Images

This Function will produce

- Bit map image BMP with Edges Coordinates
- BPW World File format for BMP Image
- JGW World file format For JPG image

D) Synchronize Google Earth with Lon Lat Geographic maps

Synchronize Google Earth with Lon Lat Geographic Maps

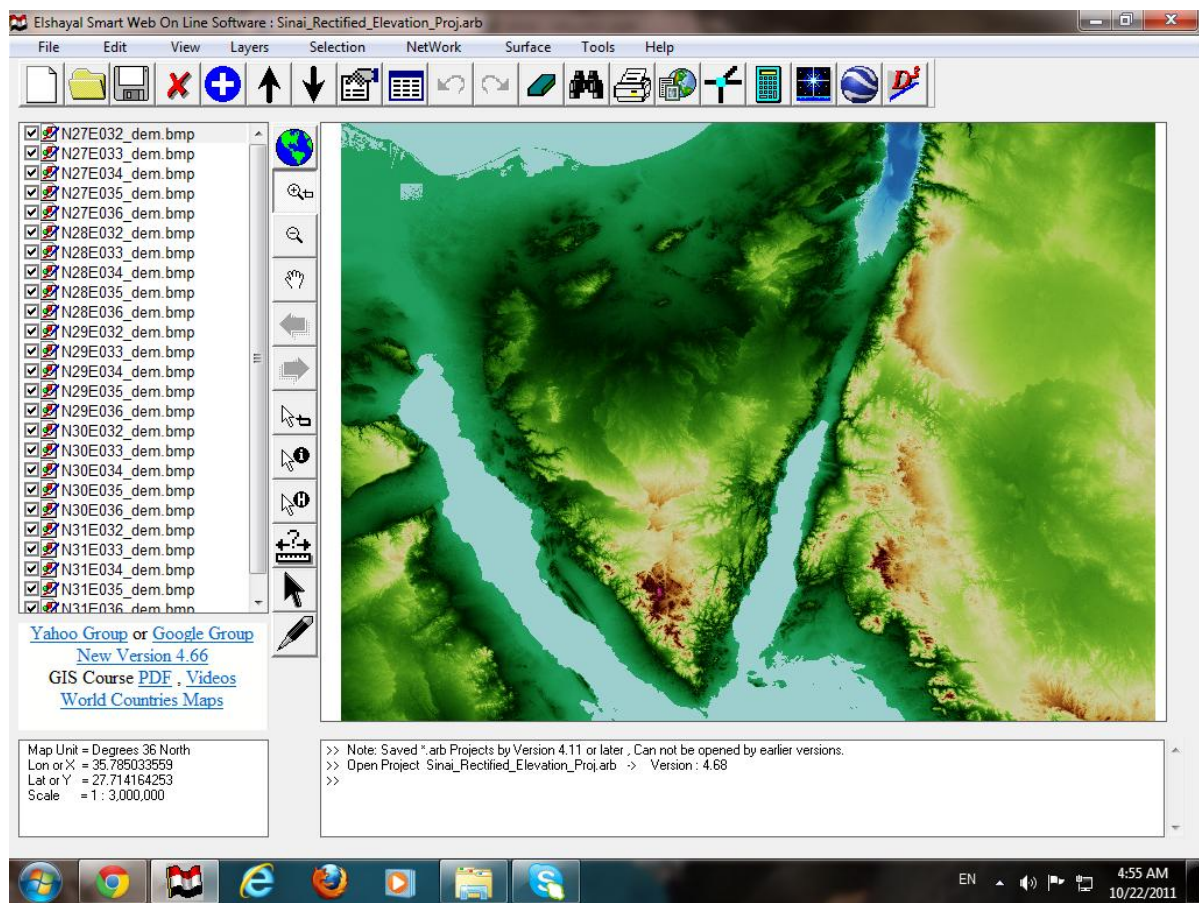

Menu → Tools → Synchronize Google Earth with Lon Lat Geographic Maps

Settings

- Open Google Earth 4.3 or Later Versions (It must be installed in your Computer)
- Inside Google Earth, do the following Settings
- Tools → Options : Turn Off Terrain
- Be Sure that North Arrow is completely very up by
 - View → Show Navigation → Always
 - Press Double Click on North
- Be Sure that Google Earth is very Flat by:
 - Pressing keyboard Shift and keyboard Up Arrow.
 - Pressing Keyboard Ctrl and keyboard down arrow
- Close Google Earth
- Open GIS Software
- Set Map Projection to Decimal Degree
- Be Sure Google Earth Software is NOT maximized and is NOT Full Screen

11) Smart GIS Course Exam (Building A GIS project)

- A) Determine a Specific Small Working Area or City
- B) Downloading Satellite Images of the Working Area
- C) Building Roads and Building shape Files Layers
- D) Digitizing the Working Area Roads and Building layers
- E) Entering the Available Attribute Data of the Digitized Layers
- F) Spatial and Attribute Data Analysis of the Digitized Layers
- G) Downloading ASTER DEM NASA Height File of the Working Area
- H) Surface Analysis of the Working Area
- I) Save Images of the Produced Map (Project Gallery)
- J) Converting Digitized GIS Layers to AutoCAD.
- K) Converting Digitized GIS Layers to HTML Web GIS Site.
